CAMBRIDGE INTERNATIONAL EXAMINATIONS

International General Certificate of Secondary Education

MARK SCHEME for the May/June 2013 series

0610 BIOLOGY

0610/53

Paper 5 (Practical Test), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

	IGCSE – May/June 2013	0610	53

Mark schemes will use these abbreviations

• ; separates marking points

• / alternatives

• R reject

• A accept (for answers correctly cued by the question)

I ignore as irrelevantecf error carried forward

• **AW** alternative wording (where responses vary more than usual)

AVP alternative valid point
 ORA or reverse argument
 OWTTE or words to that effect

• underline actual word given must be used by candidate (grammatical variants excepted)

• () the word / phrase in brackets is not required but sets the context

• D, L, T, Q quality of: drawing / labelling /

• table / detail as indicated

• max indicates the maximum number of marks

	Answer	Marks	Guidance for Examiners
1 (a) (i)	Yellow/orange to blue/black;	[1]	Check Supervisor's Report.
(ii)	Zone drawn around P/Q; Label clear zone; Zone around P larger than Q; Measurement recorded; No zone around R;	[max 4]	Check Supervisor's Report. If Report indicates otherwise – both equal accept.
(iii)	Explanation: — R no clear zone but P and Q do; Therefore enzyme must break down starch; P must have more (concentrated) enzyme (as wider clear area); Q has less enzyme in the water to breakdown starch; to produce clear areas; no enzyme — no breakdown of starch/water does not contain enzyme /AW;	[max 3]	Accept 'iodine changed since starch not broken down'. Ignore 'growth'.
(iv)	(iv) amylase/carbohydrase;		
(v)	For comparison/control;	[1]	Accept to see result without enzyme.
(b)	 remove testa/germinate peas; preparation of 'enzyme from seed; leave for 15 mins and then add iodine solution; look for colour <u>change/black</u> to clear; repeat for reliability/or to calculate an average; controlled variable; 	[max 4]	For example: place pea on plate/grind up with specified volume of water to extract enzyme and place in hole in starch agar jelly/cut the seed in half/ AW ; Accept idea of set time period. 1h max. Same size of pea/same species/same type/AW.

	IGCSE – May/June 2013	0610	53

(c)	O – outline; S – size; D – detail – show side root developing and split testa; one label from: testa/radicle/plumule/cotyledon;			[4]	Whole page allowed for drawing. Check Supervisor's Report – living specimen provided. Larger than Fig 101 mm+ Not seed/shoot/root.
(d)(i)	number of pea seeds in each pod 4 5 6 7 8 9 10 11 12	already //// already //// //// //// //// //// ////	number of pods 1 0 0 0 completed 3 4 completed 7 5 3	[2]	Accept blank or 0 for 5 to 7 seeds in pod. One for correct tally and number of pods. All boxes correct – 2 marks. 1 error in tally and ecf for number of pods – 1 mark. 2 or more errors – no marks. Place ticks under the columns.
(ii)	(ii) A- axes – labelled and evenly scaled; S – size to fill more than ½ of grid; P – plotting accurate; C- columns of equal width and touching (iii) X in bar for 4 peas (iv) variation (genetic or environmental);			[4]	x axis – number of seeds in pod and y axis number of pods. Label of number be central under column. If axes reversed max 3 for S , P and C A Within ± 1mm. ecf from tally table. If columns do not make contact.no C If line graph Max 2 – A and S only.
(iii)				[1]	
(iv)				[1]	A not all peas fertilised in pod/mutation/change in weather eg very dry/cold/less nutrients/AW. I 'not counting correctly'.
				[Total: 26]	

Page 5	Mark Scheme	Syllabus	Paper
	IGCSE – May/June 2013	0610	53

2	(a)	length of line 10 mm; formula – ST length ÷ magnification 10/2.5; actual length of leg – 4.0 mm;						A ± 1 mm. A word formula 3.6, 4.0, or 4.4 mm if line ST is 9, 10 or 11 mm.
	(b)	reasons – eig	hnid/arachnid ght/8 legs/4 p o body/cepha	•			[3]	If incorrect group – allow one feature for that group visible in Fig. Ignore negative features/ref to teeth/2 segments. Accept 2 parts to body.
							[Total: 6]	
3	(a)	label to root l	•				[2]	Line needed to indicate cell .
	(b)	substance	reagent	initial colour	results final colour	positive or negative (√ or x)		One mark per box.
		water	cobalt chloride	blue				A green yellow/yellow
		reducing sugar	Benedict's ;	blue	orange / red;	V		
		protein	biuret;	blue	blue /AW;	Х		R mauve as it is the positive result for the
		fat	ethanol +	colourless	clear /	Х		presence of protein.
			water		colourless		[6]	
					[Total: 8]
