## UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

**International General Certificate of Secondary Education** 

## MARK SCHEME for the October/November 2007 question paper

## 0620 CHEMISTRY

0620/03

Paper 3 (Extended Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2007 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

| Ь |  | 1000E - October/Hoveriber 2007 0020 00   |                                 |  |  |
|---|--|--|---------------------------------|--|--|
| 1 | diffusio<br>crystalli<br>fraction<br>filtration  | al distillation  1 As the candidate are selecting from a list, the above are the only acceptable   | [1]<br>[1]<br>[1]<br>[1]<br>[1] |  |  |
| 2 | (a) <sup>23</sup> <sub>11</sub>  | Na   | [1]                             |  |  |
|   | 40<br>18   | Ar   | [1]                             |  |  |
|   | 31<br>15   | P <sup>3–</sup> [1] for charge and [1] for symbol etc.   | [2]                             |  |  |
|   |  | $\Delta R^{3+}$ [1] for charge and [1] for symbol etc.   | [2]                             |  |  |
|   |  | CCEPT +3 and –3<br>DTE Only the above are to be awarded the mark   |                                 |  |  |
|   | <b>(b)</b> nai   | rticle B <b>or</b> <sup>23</sup> 11 <b>N</b> a <b>or</b> sodium  | [1]                             |  |  |
|   | CC   | DND they have the same proton number or the same number of protons the same atomic number  | [1]                             |  |  |
|   | NC   | The same number of electrons cept same number of electrons and protons   | [.]                             |  |  |
|   | , 10   | [Tota  | d: 8]                           |  |  |
| 3 |  | rrect ratio MgBr <sub>2</sub> <b>or</b> Mg 2Br   | [1]                             |  |  |
|   | IF t   | cept anywhere in space<br>formula suggests covalency then [1] only for MgBr <sub>2</sub>   |                                 |  |  |
|   | cor  | r Mg 2Br  prrect charges Mg <sup>2+</sup> and Br <sup>-</sup>  |                                 |  |  |
|   | 8e   | not be concerned about location of minus sign around bromine   | [1]                             |  |  |
|   | NOTE do not require correct coding – just 7 and 1 coded differently NOTE ignore electrons around magnesium |  |                                 |  |  |
|   | (b) (i)  | pattern <b>or</b> order <b>or</b> regular <b>or</b> repeat <b>or</b> alternate   | [1]                             |  |  |
|   | (-, (-,  | COND positive and negative <u>ions</u> or atoms or molecules or particles  NOTE Accept a sketch that shows the above, that is particles arranged in a regular way, e.g. any ionic compound such as sodium chloride | [1]                             |  |  |
|   | (ii)   | Any reason from the list:  | [1]                             |  |  |
|   |  | charges must balance or based on valencies or group II and group VII   |                                 |  |  |
|   |  | or group II and group VII or 2e in outer level and 7e in outer level or magnesium loses 2 electrons and bromine gains 1 electron (per atom)  |                                 |  |  |
|   | (iii)  | reducing <b>or</b> reduction <b>or</b> reductant lost electrons <b>or</b> transferred (to bromine)   | [1]<br>[1]                      |  |  |
|   |  | reduced gained or accepted electrons   | נין<br>[1]<br>[1]               |  |  |
|   |  | [Total   |                                 |  |  |

Mark Scheme IGCSE – October/November 2007

Page 2

Syllabus 0620 Paper 03

| Page 3 | Mark Scheme                   | Syllabus | Paper |
|--------|-------------------------------|----------|-------|
|        | IGCSE – October/November 2007 | 0620     | 03    |

4 (a) (i) bleach for wood pulp or preserving food or sterilising or in wine making or as a refrigerant or in metallurgy or (liquid) sulphur dioxide is used in the petroleum industry or kill microbes(etc) or insecticide

[1]

(ii) (react with) oxygen **or** air **NOT** burnt/burn in air/oxygen 450°C [1]

vanadium oxide catalyst (if oxidation state given has to be correct) **or** platinum If four conditions are given which include high pressure then **MAX** [2] High pressure is incorrect **MAX** 10 atm.

[1] [1]

(iii) ammonium sulphate **or** superphosphate **or** potassium sulphate **or** magnesium sulphate

[1]

(b) (i) vaporisation or boiling or evaporation

[1] [1]

condensation **or** liquefaction **NOTE** order in which changes are given is not important **NOT** liquid => gas => liquid

[1]

(ii) to get maximum yield of zinc **or** reduce all zinc oxide **NOTE** the above mark is awarded for why add excess carbon moves equilibrium to

. .

right **or** to favours the products **or** removes CO<sub>2</sub> from equilibrium **NOTE** this mark is awarded for how does the addition of excess carbon give max

[1]

yield of zinc

NOTE Allow any coherent explanation <u>flexibly</u> based on the above ideas **EXAMPLES**:

moves equilibrium to right [1] because carbon dioxide removed [1] to get maximum yield of zinc [1] as equilibrium moves to right [1]  ${\bf NOT}$  just to make CO from  ${\bf CO}_2$ 

[1]

(c) (i) 
$$Zn^{2+} + 2e = Zn$$

(ii) 
$$4OH^{-} - 4e = O_2 + 2H_2O$$
  
or  $4OH^{-} = O_2 + 2H_2O + 4e$   
or  $2H_2O = 4H^{+} + O_2 + 4e$   
or  $2H_2O - 4e = 4H^{+} + O_2$   
oxygen as product [1]

[2]

(iii) sulphuric acid

**TWO uses** 

[1]

**NOTE** there are no alternative answers to the above

(d) prevent iron from rusting NOT with galvanising or sacrificial protection making brass or making alloys NOT bronze electroplating or as an electrode in electrolysis cells roofing sacrificial protection coinage

[2]

[Total: 15]
