## **UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS**

**International General Certificate of Secondary Education** 

# MARK SCHEME for the May/June 2010 question paper for the guidance of teachers

# 0648 FOOD AND NUTRITION

0648/01

Paper 1 (Theory), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

simple susweet – s (4 points) Disacchadouble susweet – s broken d	gars – C <sub>12</sub> H <sub>22</sub> O <sub>11</sub> – 2 simple sugars combin bluble in water – glucose + 1 other simple s		01

avoid adding sugar to drinks – use artificial sweetener – fewer sweets/chocolate – biscuits/cakes – reduce sugar in recipes – use canned fruit in fruit juice instead of syrup – drink low calorie drinks/Diet Coke – avoid fizzy drinks – do not buy sugar-coated breakfast cereal – buy 'sugar free' products – fewer convenience foods – study nutritional information on packaging (6 points) (2 points = 1 mark)

[3]

Pa	ge 3	Mark Scheme: Teachers' version	Syllabus	Paper
		IGCSE – May/June 2010	0648	01
(a)	formation picks up transport energy p CO <sub>2</sub> attatransport	nce of iron of haemoglobin – red pigment in blood – oxygen from lungs – oxyhaemoglobin – s oxygen to cells – oxidises glucose – cell respiration roduced – leaving carbon dioxide and water – aches to haemoglobin – carboxyhaemoglobin – ed to lungs – for breathing out/disposal ) (2 points = 1 mark)	on –	[2
(b)	chocolate dried frui green ve	of iron ey – red meat (or one named example e.g. corned e – curry powder – black treacle – t (or named e.g.) – pulses (or named e.g.) – soya b getables (or named e.g.) ) (2 points = 1 mark)		coa/plain [2
(c)	<b>Deficien</b> Anaemia (1 mark)	cy disease		[1
(d)	feel dizzy	ms ed/lethargic/fatigued – weak – headaches – //faint – lacks energy – breathless = 1 mark)		[1
(a)	clear skill makes co for produ growth – helps to absorption	nce of vitamin C  n – building/maintenance of linings of digestive system on the control of the control of blood – and walls of blood vessels – helps to heal wounds/fractures – immune system obtained build strong teeth and gums – on of iron – antioxidant etc.  (2 points = 1 mark)		[2
(b)	citrus fru strawber green ve	of vitamin C it (or named e.g.) – blackcurrants – rose hips – ries – melon – tomatoes – mango – green peppers getables (or named e.g.) – new potatoes etc. ) (points = 1 mark)	_	[2
(c)	<b>Deficien</b> Scurvy (1 mark)	cy disease		[1
(d)	bruises a gums ble as blood	ms  blood vessels weaken/break – blood escapes – appear under the skin – pain in muscles and joints eed – teeth loosen - heart failure – passes through walls of capillaries etc. = 1 mark)	_	[1

Page 4	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2010	0648	01

# 4 Deficiency diseases

Not iron or vitamin C – in previous questions

Vitamin A/Retinol

Vitamin D/Cholecalciferol Vitamin B1/Thiamine Vitamin B2/Riboflavin Vitamin B3/Nicotinic acid Vitamin B12/Cobalamin

Folate/folic acid

Calcium lodine Protein

Carbohyrate/fat/protein

4 deficiency diseases x 1 point 4 associated nutrients x 1 point (8 points) (2 points = 1 mark) Night blindness/Xerophthalmia

Rickets/osteomalacia

Beriberi

Dermatitis/cataracts

Pellagra

Pernicious anaemia Anaemia/spina bifida

Rickets/osteomalacia/tetany/osteoporsis

Goitre Kwashiorkor

Marasmus (lack of energy foods)

[4]

# 5 Planning meals for the elderly

small portions - appetite reduces with age

remove bones/skin etc – eyesight may be poorer – food needs to be easy to eat/chew

may need to cut into small pieces/mince - elderly may have few teeth

fewer carbohydrate foods - elderly may be less active

need protein foods - to repair worn out cells

iron – to prevent anaemia

vitamin C – to absorb iron – immunity

calcium/phosphorus – to maintain bones and teeth – for blood clotting – muscle function

vitamin D - to absorb calcium

soft foods - easier to eat

low in fat – easier to digest – reduces risk of CHD – obesity

reduce salt – reduces risk of hypertension/high blood pressure

reduce sugar – reduces risk of tooth decay – obesity – higher sugar intake is linked to diabetes

fruit and vegetables – NSP – less risk of constipation

variety of colour - flavour - texture - to add interest - make appetising

reduce spices and strong flavours - these are less easily tolerated

snack foods should be nutritious - include milk daily etc.

(12 points) (2 points = 1 mark)

[6]

[Section A Total: 40]

Page 5	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2010	0648	01

#### **Section B**

# 6 (a) Food additives

nutritional – vitamin C in fruit juice, calcium in white flour, vitamins A and D in margarine improve keeping quality/preserve/reduce spoilage – used in processed foods make food more attractive/add colour - flavour - smell can improve texture/consistency - stabilisers emulsify fat and water – prevent separating – ice cream, mayonnaise anti-oxidant – prevent rancidity in fats can be natural but not found in particular food added to or synthetic – e.g. vitamin C can be made synthetically – can be artificial colours and flavours etc. E numbers have been approved by the European Community – must be used in smallest amount possible to produce desired effect some people are allergic/intolerant to certain additives long-term effect is not known must be stated, by law, if contained in the product danger of adding nut extracts for those allergic to nuts etc. may be used to increase sales – longer shelf-life – reduce waste etc. (10 points) (2 points = 1 mark)

## (b) Different uses of fats and oils

spreading on bread – butter, margarine frying - corn oil, sunflower seed oil, dripping sauce-making – margarine, butter aeration – margarine traps air when creamed with sugar in cakes pastry-making - holds layers apart in flaky pastry - cake-making shortening – crumbly texture of shortcrust pastry, rock buns etc. adding flavour – butter in cake-making improve keeping quality – butter used in rich cakes etc. sealing – melted butter/margarine on pate to retain moisture – flavour/colour adds calories without adding bulk - fried food dressings - French dressing form an emulsion - mayonnaise basting – adds moisture to meat cooked by dry heat/grilled/roasted decorating - butter icing make foods easier to eat/lubricates - butter on toast prevent sticking - oiled baking tins retains moisture - rich cakes glazes - melted butter on new potatoes, carrots etc. (10 points) (2 points = 1 mark)

#### (c) Reasons for choosing a vegetarian diet

religious beliefs
object to slaughter of animals – think it cruel
expensive to rear animals – land could be used for crops –
more people could be fed from same area of land
dislike of animal flesh – texture/taste etc – family custom
meat is expensive to buy
belief that vegetarian diet is more healthy –
animal fat has cholesterol – associated with CHD
recent health scares – BSE/bird 'flu etc./salmonella
(10 points) (2 points = 1 mark)

[5]

[5]

[5]

Page 6	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2010	0648	01

# 7 (a) Reasons for the importance of cereals

readily available – easy to transport – easy to grow – cheap – carbohydrate/starch – source of energy – staple food – filling – easy to store – source of (LBV) protein – NSP in wholegrains – versatile – can be used for sweet and savoury dishes – easy to prepare – easy to eat etc. (6 points) (2 points = 1 mark)

#### (b) Named cereals

wheat – oats – barley – rye – corn/maize/mealie meal –
millet – rice – sorghum
(4 points) (2 points = 1 mark) [2]

[3]

[3]

[4]

# (c) Storage of cereals

cool – dry – to prevent germination/growth – away from smells
to prevent mould – and formation of lumps –
check regularly – can be attacked by weevils –
covered containers – to prevent entry of dust etc. –
sealed – to keep out moisture etc. –
keep bins off the ground – prevent attack by rats etc. –
use in rotation – do not mix old and new supplies – inspect regularly
decay could spread from old to new – wasteful wholegrain cereals do not keep as long – fat becomes rancid etc.
(6 points) (2 points = 1 mark)

#### (d) Choice of flour for making bread

strong/hard flour – high gluten content – becomes stretchy/elastic with moisture – and kneading – stretches to hold gases – gives firm structure – white flour – lighter – so rises better – plain flour – no chemical raising agent required – wholemeal flour – contains NSP – follows dietary guidelines – not SR flour – contains baking powder – yeast is raising agent (6 points) (2 points = 1 mark)

# (e) Changes taking place when a loaf of bread is baked

rises/increases in size —
warmth of oven encourages fermentation of yeast —
carbon dioxide produced — gives open texture —
alcohol evaporates — water evaporates — pushes up dough — fat melts — light texture
yeast is killed by heat — no more carbon dioxide produced —
gas in dough expands when heated — protein/gluten coagulates —
shape sets — starch dextrinises — forms crust — browns —
crust lifts off/'oven spring' —
as carbon dioxide continues to expand after shape has set —
air replaces escaped gas — flour gelatinises —
Maillard browning — action of protein and sugar — etc.
(8 points) (2 points = 1 mark)

Page 7	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2010	0648	01

# 8 (a) Creaming

e.g. Victoria sandwich cake, queen cakes, Eve's pudding etc.
equal quantities – fat and sugar – with wooden spoon/electric mixeruntil light and fluffy – traps air – to help raise the mixture –
butter or soft margarine – good colour – and flavour –
caster sugar – finer grains – easier to cream
(6 points to include 1 example) (2 points = 1 mark)

[3]

# (b) Basting

e.g. roast beef, grilled steak etc.
pour/spoon – hot fat – over surface of food – from time to time
to prevent drying – or burning – adds flavour of fat –
and extractives
(6 points to include 1 example) (2 points = 1 mark)

[3]

# (c) Making a roux

e.g. base for sauce, soup or named e.g. – cheese sauce equal quantities – fat and flour – usually margarine/butter/dripping for colour – and flavour – melt fat – do not brown – stir in flour – wooden spoon resembles a paste – cook over gentle heat – for 1 minute – stir constantly – to prevent sticking/burning – starch absorbs fat – looks 'sandy'/like marzipan (or other description) (6 points to include 1 example) (2 points = 1 mark)

[3]

# (d) Sautéing

e.g. mushrooms, potatoes, onions
toss – small/thin pieces of food – or cooked food –
in small amount – of hot fat – over low heat – type of frying – lid on pan – until fat absorbed –
quick method – browns food
(6 points to include 1 example) (2 points = 1 mark)

# (e) Making a stock

e.g. vegetable, chicken, beef, fish boil – bones/small pieces of food – for a long time – strain to gain flavour/extractives – to add to soup/sauces/casseroles – instead of water – can use commercial stock cube (6 points to include 1 example) (2 points = 1 mark)

[3]

[Section B Total: 45]

Page 8	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2010	0648	01

#### **Section C**

# 9 (a) Discuss the reasons for preserving food and explain how food spoilage is prevented in named methods of preservation. [15]

The answer may include the following knowledge and understanding.

# Reasons for preserving

enjoy food out of season buy food when plentiful to use when scarce to cope with a glut to prevent waste to give variety – food can be frozen, dried new products made – jam, pickles etc. to enjoy foods produced in other countries to have a store of food useful in emergencies etc. to prevent the growth of yeast – mould – bacteria to prevent loss of water/dehydration of fresh foods

## Methods of preserving:

# **Freezing**

water in cells frozen – unavailable for growth of bacteria – bacteria cannot grow at low temperatures – dormant – e.g. fish, vegetables, meat etc.

# Jam-making

high sugar content /60% added sugar — water withdrawn from cells — too concentrated for bacteria to thrive sealed in jars — to prevent entry of micro-organisms e.g. plums, strawberries, guava etc.

#### **Pickling**

salt to cover food – withdraw water from cells (by osmosis) acid/vinegar to replace water – micro-organisms cannot thrive in high acidic conditions e.g. onions, gherkins, cabbage etc.

# **Pasteuristion**

heated to  $72^{\circ}$ C ( $162^{\circ}$ F) – 15 seconds **or**  $63^{\circ}$ C ( $145^{\circ}$ F) – 30 minutes cooled rapidly – destroys harmful bacteria e.g. milk, fruit juice etc.

#### <u>Ultra Heat Treatment (UHT)</u>

heated to 132°C – for not more than 1 second – destroys harmful bacteria – prevents souring e.g. milk, cream etc.

# **Bottling and Canning**

heat destroys bacteria – sealed to prevent further entry of bacteria e.g. fruit, milk, vegetables, fish etc.

Page 9	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2010	0648	01

#### Drying

water removed – bacteria cannot multiply without water e.g. fruit, meat, fish, herbs, spices etc.

## Salting

water removed by osmosis – micro-organisms need water to thrive e.g. fish, beans etc.

#### **Smoking**

salt removes water – phenols from smoke deposited on food surface inhibits growth of micro-organisms e.g. fish, meat

# Accelerated Freeze Drying (AFD)

water sublimes in vacuum – structure remains same – micro-organisms need water to thrive e.g. coffee, vegetables, strawberries

# Vacuum packing

air removed – entry of micro-organisms prevented – no oxygen for bacterial growth e.g. meat, fish, coffee etc.

#### <u>Irradiation</u>

packages irradiated – no change to appearance of food – cannot detect that process has taken place – micro-organisms destroyed by gamma rays – e.g. spices, strawberries etc.

# **Artificial additives**

sulfur dioxide – nitrates – inhibit growth of micro-organisms e.g. sausages, bacon etc.

ge 10	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2010	0648	01
<b>Band</b>	<u>Descriptor</u>	Part mark	<u>Total</u>
High	<ul> <li>Can identify many reasons for preserving food</li> <li>Is able to identify and discuss several methods of preservation</li> <li>Gives examples to illustrate points made</li> <li>Understanding of the topic is apparent</li> <li>Information is specific and generally accurate</li> <li>All areas of question addressed</li> <li>Answers are detailed where appropriate</li> <li>Some specific facts included and the topic is addr in its widest application</li> </ul>		[15]
Middle	<ul> <li>Some reasons for preserving food</li> <li>Is able to identify a few methods of preservation</li> <li>Some discussion or explanations given</li> <li>Gives a few examples to illustrate points made</li> <li>Shows some understanding of the topic</li> <li>Information is basic and generally accurate</li> <li>Some areas of question addressed</li> <li>Gaps in knowledge will be apparent</li> <li>May be a few specific facts</li> <li>Answer will be detailed in parts and superficial in a Overall lack of detail</li> </ul>	6–10	
Low	<ul> <li>May give a few reasons for preserving food</li> <li>Mentions some methods of preservation</li> <li>May give examples to illustrate</li> <li>Answer tends to be a list of statements</li> <li>Not always accurate</li> <li>Information is brief</li> <li>Superficial treatment of topic</li> <li>Answers not specific</li> <li>Little or no detailed information</li> <li>Emphasis on one part of the question</li> </ul>	0–5	

Page 10

Lack of knowledge will be apparent

Page 11	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2010	0648	01

# 9 (b) Discuss the nutritive value of eggs and explain how they can be used in the preparation of dishes. [15]

The answer may include the following knowledge and understanding.

# **Nutritive value of eggs**

protein (or named e.g. ovalbumin/mucin/vitellin) -

growth/repair/maintenance/energy/hormones/enzymes etc.

fat – saturated – energy/warmth/ absorb vitamins A,D,E and K etc,

vitamin A/retinol – prevent night blindness/healthy skin/mucous membranes etc.

vitamin D/cholecalciferol - absorption of calcium/bones and teeth etc,

vitamin B2/riboflavin (or vitamin B) – release energy from

carbohydrates/growth/clear skin

iron – haemoglobin/transport oxygen/release energy from glucose/ prevent anaemia etc.

phosphorus - works with calcium/formation of bones and teeth/

formation of protoplasm/component of protein

sulfur – formation of protoplasm/component of protein

## Uses of eggs

main dish/breakfast/snack – omelette, scrambled egg, boiled egg etc.

trapping air/making mixtures rise – Swiss roll, sponge flan etc. lightening mousse, meringue, soufflé thickening custard, sauces, soup etc.

setting quiche, rich cakes, baked egg custard etc.

emulsifying mayonnaise, rich cakes etc.

binding croquettes, fish cakes, stuffing etc.

coating Scotch eggs, fish fillets etc.

glazing pastry, bread etc.

enriching sauces, milk pudding, soup etc.

garnishing salad, dressed crab, omelette strips etc.

colour pastry, cake etc.

egg white can hold 7 × its own volume of air – protein entangles air

must be no fat in bowl/no egg yolk etc. – will not whisk protein coagulates/sets/solidifies/hardens when heated – forms a seal around foods to be fried – fat cannot penetrate –

egg white at 60°C - egg yolk at 66°C -

egg white thickens - changes from transparent to opaque -

becomes firm - then rubbery if overcooked -

yolk thickens – becomes powdery when overheated –

protein denatures when heated – changes cannot be reversed

indigestible if overcooked – protein denatures etc.
