

UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

## MARK SCHEME for the May/June 2010 question paper

## for the guidance of teachers

## 0680 ENVIRONMENTAL MANAGEMENT

0680/21

Paper 21, maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

UNIVERSITY of CAMBRIDGE International Examinations

		IGCSE – May/June 2010	0680	21
(c) (		Possible labels: tap root of date palm, large branching root system of the scrub, both have deep roots reaching water table, shallow surface rooting system of cactus, succulent stem of cactus, tough/thick bark of the date palm, thorny nature of cactus and scrub plant, only a small part of the scrub plant above the surface. Four labels correctly placed = 4 marks		[4]
(i	(ii) Cactus only has surface roots to trap water after occasional desert rains, its adaptations are above the surface storing moisture in its fleshy stem, whereas the plants rely more upon greatest possible use of underground water, either down water table or extensive coverage.			nereas the othe
		Two points made along these lines.		[2
(d) (	• •	Wandering the desert for new pastures with their herd Reliance on animals for all their needs = pastoral	s = nomadism	
		Stating only from the passage = 1 mark Explaining how this makes it pastoral nomadism = 2 <sup>nd</sup>	mark	[2
(i		Main reason is that the camel is the beast of burden t move around the desert searching for fresh pastures. Other acceptable reasons are: has the greatest number of uses food and drink plus of best adapted of the animals to living in desert condition useful for other aspects of their lives such as trading.	others,	ongings as they
		Two reasons sufficiently distinct.		[2
(ii		Still carried out after having been followed for centur grazing takes place only where vegetation exists, gr occurs, have an extra income from trading, way of life on large inputs from outside.	oup moves on bef	ore overgrazing
		Some understanding = 1 mark

	IGCSE – May/June 2010	0680	21

(iv) Effects can be positive/beneficial, or negative/disadvantages.

Positive effects – mainly economic; they include work on the oil wells and in the refineries, likely to be much better paid; can live in one place instead of the nomadic desert existence. Urban living with all the modern conveniences and less exposed to natural conditions and changes.

Negative effects – some economic because land traditionally used and crossed over by them is being taken away for irrigated farming and oil. Migration with animals made more difficult by pipelines crossing the desert. Social – disruption caused by migrations of young folk, likely in future to be short of people to carry on the traditions, and do the work as their parents get older. Once disrupted, their way of life is in danger of being lost for ever.

Effects mentioned, but not really explained; mainly one effect, or all negative or positive leading to a narrow answer. [1–2 marks]

Both social and economic effects covered, including both good and bad. Reasonable breadth of coverage. [3–4 marks]

- (e) (i) Overgrazing or over cultivation; allow deforestation/very intensive farming. [1]
  - (ii) The underlying/basic cause = 1 mark
    Elaborated upon/emphasised = 2<sup>nd</sup> mark
    [2]
  - (iii) Background about why rates are high i.e. high birth rates compared with low and declining death rates, resulting in high rates of natural increase.

The explanation can be for both of these, but it is most likely that answers will be about why birth rates remain high with references to social and economic factors such as family planning availability, social customs, role of certain religions, lack of female education, limited career opportunities for women.

The slow progress element can bring in the role of governments and the existence or otherwise of population policies. Opportunities for case study use e.g. 1 child policy in China showing what could be done, but what has not been done elsewhere in developing countries.

National economic factors also play a part – the poverty of many African countries which can't afford population policies even if the will exists.

General points without development, or over-concentration on only one. [1–2 marks]

Useful range of relevant points made, with supporting detail. [3–4 marks]

As before, but with a reference to the African and other developing countries part of the question. [5 marks]

[Total: 40]

2 (a)	(i)	Formed where there used to be dense forests decompose, covered over by new surface deposits into layers of coal.		
		Understood and compete = 3 marks Some or partial explanation = 1–2 marks		[3]
	(ii)	Fossil fuel – living matter from millions of years ago Fossil fuel in the sense of time taken to form – up to	•	
		1 mark for each reason.		[2]
	(iii)	Plants absorb carbon dioxide from the air as part o stored and is released when burnt, carbon in plants the air.		
		Understood = 2 marks Some understanding = 1 mark		[2]
(b)	(i)	All plots accurate = 3 marks Key completed in agreement with graph = 1 mark		
		If not, 1 or 2 correct plots = 1 mark 3 or 4 correct plots = 2 marks		[4]
	(ii)	The gap between ten year periods has increased = supported by values read off graph 1.2 for 1987–97		007.
		2 marks		[2]
	(iii)	Oil, coal and natural gas identified as being the foss total of 9.7 billion out of 11 billion, estimate or calculation of the percentage for emphase comment on the low contribution from alternatives.		
		Three statements along these lines.		[3]
(c)	(i)	Oil can be brought to surface using drilling machin coal need men and mines, oil can be obtained both		
	(ii)	Oil is transported by pipelines and tankers over lon than a solid it flows and is more easily transferred coal is bulkier to load and unload.		-
	(iii)	Oil, being a liquid, is easier to control in use – amou be switched on and off, coal, being a solid, involves heating up and reducing heat are slower/less finely	more mechanical a	and human work,
		Entirely or heavily one sided statements = 1 mark m Two sides comparative statements = up to 2 marks Reserve a minimum of 1 mark for each part. Unclaimed marks can be topped up by any second of the headings. Any mixture of 1 and 2 mark statements; maximum t	each comparative stater	-

•			-

(d) (i) 25%

[1]

[2]

- (ii) Two aspects to this; the basic statements are:
  - a lot of wind turbines are needed to match the output from one coal fired power station (1000 at best, in reality 4000 of them)
  - reliability because the coal fired station can deliver a consistently high output close to full, whereas the wind turbine is only 25% efficient.

Fuller development of these statements can include:

great areas of land would need to be covered to give the same output as one compact power station,

wind farms must have greater costs of construction and operation, there are days without wind (why the wind turbine is only 25% efficient), on these days another source like a coal fired station is needed.

Part answer – 1 or 2 marks Fuller answer showing more understanding – 3 or 4 marks [4]

(iii) Sulphur dioxide and nitrogen oxides are released, these cause acid rain which destroys forests/kills trees, lakes and water courses become too acid for plant/water life.

Two points made along these lines.

(iv) Local problem:

greatest concentration of pollution emissions in area around chimney, washed down to surface when raining (wet acid rain), damage around power stations includes rotting stonework and dead trees.

International problem:

winds are capable of carrying pollutants in the atmosphere long distances to other countries,

example of where this is a problem such as UK to Scandinavia.

Points made along these lines – minimum 1 mark for each of local and international. Otherwise 3 marks for 3 for explanatory points. [3]

 (i) Producers are concentrated in three continents (North America, Europe and Asia), all are in the northern hemisphere, mostly developed world countries,

mostly developed world countries,

none of them are from southern hemisphere continents dominated by developing countries,

nuclear power is rich world energy source/beyond the means and technology of poor countries.

Three points made along these lines, including some reference to both continents 'with' and 'without' nuclear power stations. [3]

Page 7	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2010	0680	21

(ii) Arguments for nuclear power include clean in the sense of giving no carbon emissions, not contributing to global warming, source uses relatively little raw material (uranium) compared with the amount of energy produced, known technology which has been made more efficient.

Arguments against nuclear power include generates wastes that are radioactive without satisfactory means of storage, remain dangerously radioactive for many years, radioactive leaks are highly dangerous to living things, causing cancers, explosion of Chernobyl contaminated a wide area, known world reserves of uranium are running down.

Some arguments for or against, but simple/shallow/unsupported statements. May be very unbalanced e.g. dominated by arguments against. [1–2 marks]

More substantial arguments, with something for both sides, even if not in perfect balance. More understanding shown. View may be explained no better than in an earlier statement. [3–4 marks]

Arguments made for both sides. The view expressed is an overview and is supported by the explanation. [5 marks]
