

SYLLABUS

**Cambridge International AS and A Level
Information Technology**

9626

For examination in June and November 2017, 2018 and 2019.
Also available for examination in March 2017, 2018 and 2019
for India only.

What has changed in Cambridge International AS and A Level Information Technology 9626 for 2017, 2018 and 2019?

We have updated this syllabus. The latest syllabus is version 5, published September 2017.

The significant changes in Version 5 of the syllabus, published September 2017, are indicated by single black vertical lines on either side of the text.

Changes have been made to the following sections:

Section 3 Syllabus content, subsections 8, 9, 17, 18 and 19

8. Spreadsheets

8.1 Create a spreadsheet (page 20)

Additional bullet point added to 'create structure section':

- freezing panes and windows

Additional function added to 'create formulae and functions section':

INDEX/MATCH

Additional bullet point added to 'create formulae and functions section':

- summarise and display data using pivot tables and pivot charts

8.3 Modelling (page 21)

Additional bullet point added:

- use what-if analysis (including: the use of scenarios)

9. Database and file concepts

9.1 Create a database (page 22)

use form controls, create linked subforms

have been added

17. Animation (page 29)

The first bullet has been updated and now reads:

- create and evaluate an animation (stop frame and key frame) that meets the requirements of its intended application and audience

Additional bullet point added:

- use masking layers

18. Mail merge (page 29)

Additional bullet point added:

- specify rules for managing recipients and contents of a mail merge

19. Programming for the web (page 30)

Additional bullet point added:

- output/display data to:
 - HTML documents
 - HTML elements
 - alert boxes
 - the browser console

Section 4. Description of components, subsections Paper 2 Practical and Paper 4 Advanced Practical

Work must be saved in the correct file format as stated in the tasks. If work is saved in an incorrect file format, candidates will **not** receive marks for that task

Further corrections are listed on pages 35 and 36

Welcome

Cambridge International AS and A Level Information Technology encourages learners to explore their subject in depth. The syllabus has been designed, in consultation with teachers and universities, to help learners develop not only subject knowledge, but also a strong understanding of some of the key concepts that are critical to mastering the subject.

All our syllabuses are reviewed and updated regularly so that they reflect the latest thinking of international experts and practitioners, and take account of the different national contexts in which they are taught. Consultation is an important part of the way we develop our syllabuses.

Consulting teachers

Teachers at Cambridge schools worldwide help us to shape our Cambridge International AS and A Level syllabuses. The feedback contributes to the development of syllabus content, assessments and support materials. Consulting teachers ensures that our materials are designed carefully around their needs and the needs of their learners.

Consulting universities

Like teachers, universities help to shape our Cambridge International AS and A Level syllabuses. We consult with leading higher education institutions to make sure the syllabuses encourage learners to get a firm grasp of the subject's key concepts and develop the skills necessary for success at university.

Key concepts

Key concepts are essential ideas, theories, principles or mental tools that help learners to develop a deep understanding of their subject and make links between the different topics. The key concepts that this syllabus is designed to develop are detailed on pages 7–8. The teaching support package helps teachers integrate the key concepts into their teaching, showing how they fit into the overall syllabus and suggesting ways to teach them with each topic.

Teacher support

Our comprehensive teacher support will help you deliver the syllabus confidently and effectively. The support includes resources for teaching and learning as well as exam preparation. Learn more on page 10.

“ Cambridge International AS and A Levels prepare students well for university because they've learnt to go into a subject in considerable depth. There's that ability to really understand the depth and richness and the detail of a subject. It's a wonderful preparation for what they are going to face at university. ”

Christoph Guttentag, Dean of Undergraduate Admissions, Duke University, USA

Why Cambridge International Examinations?

Cambridge International Examinations is part of the University of Cambridge. We prepare school students for life, helping them develop an informed curiosity and a lasting passion for learning. Our international qualifications are recognised by the world's best universities and employers, giving students a wide range of options in their education and career. As a not-for-profit organisation, we devote our resources to delivering high-quality educational programmes that can unlock learners' potential.

Our programmes set the global standard for international education. They are created by subject experts, are rooted in academic rigour, and provide a strong platform for progression. Over 10 000 schools in 160 countries work with us to prepare nearly a million learners for their future with an international education from Cambridge.

Cambridge learners

Cambridge programmes and qualifications develop not only content but also skills. We help learners to bridge the gap to the next stage of education and the world of work. We encourage Cambridge learners to be:

- **confident** in working with information and ideas – their own and those of others
- **responsible** for themselves, responsive to and respectful of others
- **reflective** as learners, developing their ability to learn
- **innovative** and equipped for new and future challenges
- **engaged** intellectually and socially ready to make a difference.

Learn more about the Cambridge learner attributes in Chapter 2 of our *Implementing the curriculum with Cambridge* guide at www.cie.org.uk/curriculumguide

Why Cambridge International AS and A Levels?

Cambridge International AS and A Levels are international in outlook, but retain a local relevance. The syllabuses provide opportunities for contextualised learning and the content has been created to suit a wide variety of schools, avoid cultural bias and develop essential lifelong skills, including creative thinking and problem-solving.

Our aim is to balance knowledge, understanding and skills in our qualifications to enable students to become effective learners and to provide a solid foundation for their continuing educational journey. Cambridge International AS and A Levels give learners building blocks for an individualised curriculum that develops their knowledge, understanding and skills.

Cambridge International AS and A Level curricula are flexible. It is possible to offer almost any combination from a wide range of subjects. Cambridge International A Level is typically a two-year course, and Cambridge International AS Level is typically one year. Some subjects can be started as a Cambridge International AS Level and extended to a Cambridge International A Level.

There are three possible assessment approaches for Cambridge International AS and A Level:

Every year thousands of learners with Cambridge International AS and A Levels gain places at leading universities worldwide. Cambridge International AS and A Levels are accepted and valued by top universities around the world including those in the UK, US (including Ivy League universities), European nations, Australia, Canada and New Zealand. Learners should check the university website for specific entry requirements before applying.

Did you know?

Many universities accept Cambridge International AS Levels in their own right as qualifications counting towards entry to courses in the same or other related subjects. Many learners who take Cambridge International AS Levels also choose to progress to Cambridge International A Level.

Why Cambridge International AS and A Level Information Technology?

About the syllabus

In a world where information technology (IT) is constantly changing, individuals increasingly need technological and information literacy skills that include the ability to gather, process and manipulate data.

The impact of IT on society is enormous and as the percentage of businesses and households connected to communication networks such as the internet grows, so does the need for individuals who understand these new technologies.

This syllabus encourages learners to become effective and discerning users of IT. It helps them to develop a broad range of IT skills, knowledge and understanding. Learners study the structure and use of IT systems within a wide range of organisations, including the use of a variety of computer networks. As a result, learners gain an understanding of IT system life cycles, and how these affect the workplace. They also learn about the wider impact of IT on society in general. At A Level, learners also study simple programming for the web relevant to their own use of IT.

Key concepts

The key concepts on which this syllabus is built are set out below. These key concepts can help teachers think about how to approach each syllabus topic in order to encourage learners to make links between topics and develop a deep overall understanding of the subject. The teaching support package gives teachers guidance on integrating the key concepts into their teaching. See page 10 for more information on our teacher support.

As a teacher, you will refer to these concepts again and again to help unify the subject and make sense of it. If mastered, learners can use the concepts to solve problems or to understand unfamiliar subject-related material.

- **Impact of Information Technology**

Information Technology (IT) is the application of technology to process information.

The impact of IT on all aspects of everyday life is immense. The enormity of the impact can be seen in industry and commerce, transport, leisure, medicine and the home. The impact on the work force is a very important factor to consider and communications using new technologies have made the World seem smaller.

- **Hardware and software**

Many hardware components and software applications are used in IT systems. It is important to understand how these work, and how they interact with each other and within our environment.

- **Network**

Computer systems can be connected together to form networks allowing them to share resources.

- **The internet**

The internet is a global communications network that allows computers worldwide to connect and share information in many different forms. Examples include email, web pages, and audio and video files. The impact of the internet on our lives is profound. While it provides huge benefits to society, security of data is an issue, both in the work place and for personal data.

- **System life cycle**

Information systems are developed within a planned continuous cycle that covers the initial development of the system through to its scheduled updating or redevelopment. Each phase of development is organised into separate stages.

- **New technologies**

As the information industry changes so rapidly, it is important to keep track of new and emerging technologies and consider how they might affect everyday life.

Guided learning hours

Guided learning hours give an indication of the amount of contact time teachers need to have with learners to deliver a particular course. Our syllabuses are designed around 180 guided learning hours for Cambridge International AS Level, and around 360 guided learning hours for Cambridge International A Level.

These figures are for guidance only. The number of hours needed to gain the qualification may vary depending on local practice and the learners' previous experience of the subject.

Prior learning

We recommend that candidates who are beginning this course should have previously completed a Cambridge IGCSE course, or the equivalent, in Information and Communication Technology or in Computer Science.

Progression

Cambridge International A Level Information Technology provides a suitable foundation for the study of IT or related courses in higher education. Equally it is suitable for candidates intending to pursue careers or further study in IT, or as part of a course of general education. Cambridge International AS Level Information Technology is the first half of Cambridge International A Level Information Technology. Depending on local university entrance requirements, the qualification may permit or assist progression directly to university courses in information technology or some other subjects.

For more information about the relationship between the Cambridge International AS Level and Cambridge International A Level, see the 'Assessment' section of the syllabus overview.

How can I find out more?

If you are already a Cambridge school

You can make entries for this qualification through your usual channels. If you have any questions, please contact us at info@cie.org.uk

If you are not yet a Cambridge school

Learn more about the benefits of becoming a Cambridge school from our website at www.cie.org.uk/startcambridge

Email us at info@cie.org.uk to find out how your organisation can register to become a Cambridge school.

Cambridge AICE

Cambridge AICE Diploma is the group award of the Cambridge International AS and A Level. It gives schools the opportunity to benefit from offering a broad and balanced curriculum by recognising the achievements of candidates who pass examinations from different curriculum groups.

Learn more

For more details go to www.cie.org.uk/aice

“ Our research has shown that students who came to the university with a Cambridge AICE background performed better than anyone else that came to the university. That really wasn't surprising considering the emphasis they have on critical research and analysis, and that's what we require at university. ”

John Barnhill, Assistant Vice President for Enrolment Management, Florida State University, USA

Teacher support

We offer a wide range of practical and innovative support to help teachers plan and deliver our programmes and qualifications confidently.

The support package for our Cambridge International AS and A Levels will help teachers integrate key concepts into their teaching, showing how they fit into the overall syllabus and suggesting ways to teach them within each topic. It also gives teachers access to a worldwide teaching community enabling them to connect with other teachers, swap ideas and share best practice.

Teaching and learning resources

- Schemes of work provide teachers with a medium-term plan with ideas on how to deliver the course.
- Endorsed textbooks, ebooks and digital resources produced by leading publishers. We have quality checked these materials to make sure they provide a high level of support for teachers and learners.
- Resource lists to help support teaching, including textbooks and websites.

Exam preparation resources

- Past question papers and mark schemes so teachers can give learners the opportunity to practise answering different questions.
- Example candidate responses to help teachers to see the level of performance needed to achieve key grades and understand exactly what examiners are looking for.
- Principal examiner reports describing learners' overall performance on each part of the papers. The reports give insight into common misconceptions shown by learners, which teachers can address in lessons.

Cambridge International AS and A Level support for teachers

Professional development

Face-to-face training

We hold workshops around the world to support teachers in delivering Cambridge syllabuses and developing their skills.

Online training

We offer self-study and tutor-led online training courses via our virtual learning environment. A wide range of syllabus-specific courses and skills courses is available. We also offer training via video conference and webinars.

Qualifications

We offer a wide range of practice-based qualifications at Certificate and Diploma level, providing a framework for continuing professional development.

1. Syllabus overview

1.1 Content

Candidates for Cambridge International AS Information Technology study the following topics 1–10.

- 1. Data, information, knowledge and processing**
- 2. Hardware and software**
- 3. Monitoring and control**
- 4. E-safety and health and safety**
- 5. The digital divide**
- 6. Using networks**
- 7. Expert systems**
- 8. Spreadsheets**
- 9. Database and file concepts**
- 10. Sound and video editing**

Candidates for Cambridge International A Level Information Technology study topics 1–10 **and** the following topics 11–19.

- 11. Emerging technologies**
- 12. Role and impact of IT in society**
- 13. Networks**
- 14. Project management**
- 15. System life cycle**
- 16. Graphics creation**
- 17. Animation**
- 18. Mail merge**
- 19. Programming for the web**

1.2 Assessment

For Cambridge International AS and A Level Information Technology, candidates:

- take Papers 1 and 2 only (for the Cambridge International AS Level qualification)
- or
- follow a staged assessment route by taking Papers 1 and 2 (for Cambridge International AS Level qualification) in one series, then Papers 3 and 4 (for Cambridge International A Level qualification) in a later series
- or
- take Papers 1, 2, 3 and 4 in the same examination series, leading to the full Cambridge International A Level.

All components are externally assessed.

Component	Weighting	
	AS Level	A Level
<p>Paper 1 Theory 1 hour 45 minutes</p> <p>This written paper tests sections 1–10 of the syllabus content. Candidates answer each question in the spaces provided on the question paper. All questions are compulsory.</p> <p>90 marks</p>	50%	25%
<p>Paper 2 Practical 2 hours 30 minutes</p> <p>This paper tests sections 8–10 of the syllabus content. Candidates will also need to use their previous knowledge from sections 1–7. All tasks are compulsory.</p> <p>Candidates must use the most appropriate software and the most appropriate methods.</p> <p>110 marks</p>	50%	25%
<p>Paper 3 Advanced Theory 1 hour 45 minutes</p> <p>This written paper tests sections 11–19 of the syllabus content. The content of sections 1–10 is assumed knowledge.</p> <p>Candidates answer each question in the spaces provided on the question paper. All questions are compulsory.</p> <p>90 marks</p>	–	25%
<p>Paper 4 Advanced Practical 2 hours 30 minutes</p> <p>This paper tests sections 16–19 of the syllabus content, and sections 8–9 of the syllabus content within a problem-solving context. Candidates will also need to use their previous knowledge from all sections of the syllabus. All tasks are compulsory.</p> <p>Candidates must use the most appropriate software and the most appropriate methods.</p> <p>110 marks</p>	–	25%

Availability

This syllabus is examined in the June and November examination series. This syllabus is also available for examination in March for India only.

This syllabus is available to private candidates.

Detailed timetables are available from www.cie.org.uk/examsOfficers

Centres in the UK that receive government funding are advised to consult the Cambridge website www.cie.org.uk for the latest information before beginning to teach this syllabus.

Combining this with other syllabuses

Candidates can combine this syllabus in an examination series with any other Cambridge syllabus, except:

- syllabuses with the same title at the same level
- 9713 AS/A Level Applied Information and Communication Technology
- 9608 AS/A Level Computer Science.

2. Syllabus aims and assessment objectives

2.1 Syllabus aims

The syllabus aims to enable candidates to:

- develop a broad range of IT skills
- develop an understanding of the parts, use and applications of IT systems within a range of organisations, including the use of basic computer networks
- develop an understanding of how IT systems affect society in general
- develop an understanding of the main system life cycle and apply this understanding to workplace situations
- develop a broad knowledge of the use of IT in workplace situations
- develop an understanding of project management skills (A Level only)
- be aware of new and emerging technologies
- be aware of the role of the internet and its potential but also its risks
- apply their knowledge and understanding of IT to solve problems.

2.2 Assessment objectives

Cambridge International AS and A Level Information Technology has three assessment objectives:

AO1 Recall, select and communicate knowledge and understanding of IT

AO2 Apply knowledge, understanding and skills to produce IT-based solutions

AO3 Analyse, evaluate, make reasoned judgements and present conclusions

2.3 Relationship between assessment objectives and components

The approximate weightings allocated to each of the assessment objectives are summarised below.

The table shows the assessment objectives (AO) as a percentage of each component.

Component	AO1 %	AO2 %	AO3 %
Question Paper 1 Theory	50	32	18
Question Paper 2 Practical	5	90	5
Question Paper 3 Advanced Theory	32	40	28
Question Paper 4 Advanced Practical	10	85	5

2.4 Relationship between assessment objectives and qualifications

The approximate weightings allocated to each of the assessment objectives are summarised below.

The table shows the assessment objectives (AO) as a percentage of each qualification.

Assessment objective	Weighting in AS Level %	Weighting in A Level %
AO1	27.5	21
AO2	61	62.5
AO3	11.5	16.5

3. Syllabus content

Annual technical updates

Technical updates will be published each year to take account of emerging technologies relevant to the syllabus content. Please refer to the updates page for this syllabus on the Cambridge website www.cie.org.uk/alevel

Candidates for Cambridge International AS Level Information Technology study topics 1–10.

Candidates for Cambridge International A Level Information Technology study all topics.

The content of the AS Level topics 1–10 is assumed knowledge for the A Level components.

The following information identifies content which must be covered within topics 1–19. Where the term ‘including’ is used, everything listed must be studied. However, this list is not exhaustive and other related aspects should be studied also.

To illustrate this, in Topic 2.2 ‘System, application and user interface software’, when designing a user interface (see bullet point 7), candidates need to study only the use of colour, layout, font size, quantity of information and controls. However, when evaluating the characteristics of different types of user interface (see bullet point 6), other characteristics should be studied in addition to those listed.

Note that no marks are awarded for brand names in candidate responses.

1. Data, information, knowledge and processing

Candidates should be able to:

1.1 Data, information and knowledge

- define data, clearly identifying that data has no meaning
- define information and show how data can become information through context and meaning
- define knowledge and understand that information becomes knowledge when human experience is applied

1.2 Sources of data

- define static data and give an example
- define dynamic data and give an example
- compare the use of static information sources with dynamic information sources
- define direct and indirect data source
- understand the advantages and disadvantages of gathering data from direct and indirect data sources

1.3 Quality of information

- understand how accuracy, relevance, age, level of detail and completeness of the information can affect its quality

1.4 Coding, encoding and encrypting data

- describe the coding of data (including: M for male, F for female) and more intricate codes (including: clothing type, sizes and colour of garment)
- discuss the advantages and disadvantages of the coding of data
- evaluate the need for encoding data and analyse the different methods that can be used to encode data (including: codecs)
- define encryption and describe different methods of encryption (including: symmetric, asymmetric, public key, private key)
- evaluate the need for encryption and how it can be used to protect data such as on a hard disk, email or in HTTPS websites
- discuss encryption protocols (including: the purpose of Secure Socket Layer (SSL)/Transport Layer Security (TLS) and the use of SSL/TLS in client server communication)

1.5 Checking the accuracy of data

- define validation and analyse a range of validation methods (including: presence check, range check, type check, length check, format check and check digit, lookup check, consistency check, limit check)
- define verification and analyse verification methods (including: visual checking and double data entry)
- explain the need for both validation and verification
- define proof reading

2. Hardware and software

Candidates should be able to:

2.1 Hardware

- define the term hardware
- evaluate internal hardware devices (including: central processing unit (CPU), motherboard, random access memory (RAM), read only memory (ROM), graphics card, sound card, hard disk drive (HDD), solid state drive (SSD))
- evaluate external hardware devices (including: cloud, monitor, keyboard, mouse, printer (laser, inkjet, dot matrix, plotter), speakers, camera (digital, video), web cam, scanner, magnetic ink character reader (MICR), optical mark reader (OMR), optical character reader (OCR), bar code reader, pen drive, portable hard disk drive, blue-ray disk drive, memory card)
- explain the purpose of storage devices
- evaluate storage devices (including: magnetic tape drive, optical, hard disk drive (HDD), solid state drive (SSD))
- explain the purpose of input and output devices
- evaluate different input, storage or output devices for a given task

2.2 System, application and user interface software

- define the term software
- evaluate types of software (system software and application software)
- explain the purpose of system software (including: compilers, linkers, device drivers, operating systems and utilities, interpreters)
- evaluate application software (including: word processing, spreadsheet, database management systems, control software, measuring software, applets and apps, photo editing software, video editing software, graphics manipulation software, communications software, web authoring software)

- evaluate application software for a given task
- evaluate the characteristics of different types of user interface (including: command line interface, graphical user interface, dialogue interface, gesture based interface)
- evaluate the use of colour, layout, font size, quantity of information and controls when designing a user interface
- evaluate mental models and how they can be used when designing a user interface

2.3 Utility software

- define utility software
- describe the role of different utility software (including: anti-virus, back-up, data compression, disk defragmentation, formatting, file-copying, deleting)

2.4 Custom written software and off-the-shelf software

- compare the benefits and drawbacks of custom written software and off-the-shelf software

2.5 Compiler and interpreter

- describe the function of a compiler
- describe the function of an interpreter
- evaluate the difference between a compiler and an interpreter

3. Monitoring and control

Candidates should be able to:

- identify a range of sensors and describe their use in monitoring technologies
- identify a range of sensors and describe their use in control technologies
- evaluate the use of monitoring technologies in everyday life (including: CCTV monitoring, environmental monitoring, workplace monitoring)
- evaluate the use of control technologies in everyday life (including: household appliances, car park barriers, traffic lights)

4. E-safety and health and safety

Candidates should be able to:

- explain why personal data should be kept confidential
- describe how personal data can be gathered by unauthorised persons (including: by smishing, vishing, phishing and pharming), and how this might be prevented
- discuss why e-safety is necessary
- describe malware issues (including: Trojan Horse, worms, spyware, adware, rootkit, malicious bots, ransomware)
- describe a range of potential health issues that could arise from using IT
- describe a range of safety issues relating to the use of IT

5. The digital divide

Candidates should be able to:

- understand that the digital divide refers to the gap between people and regions that have access to aspects of modern technology (including: telephone, television, personal computers and the internet), and those that do not or those that have restricted access
- understand that the digital divide can exist between:
 - people in cities and people in rural areas
 - the educated and the uneducated
 - socioeconomic groups
 - more and less industrially developed nations
 - high and low performance computers, wireless connections

6. Using networks

Candidates should be able to:

6.1 Network types

- discuss the advantages and disadvantages of networking computers
- compare the characteristics of a local area network (LAN) with a wide area network (WAN)
- describe client-server and peer-to-peer networks
- describe the characteristics and purpose of virtual private networks (VPN)
- discuss the advantages and disadvantages of different network types (including: client-server, peer-to-peer, VPN)
- describe the characteristics and purpose of intranets and extranets
- describe the characteristics and purposes of the internet
- define the term the internet
- describe how the internet is used for communication (including: IM, VOIP and news services)
- discuss the benefits and drawbacks of using the internet
- define the term World Wide Web
- discuss the difference between the internet and the World Wide Web
- discuss the advantages and disadvantages of mobile networks

6.2 Video and web conferencing

- describe how to set up a video conference
- describe how to set up a web conference
- describe the use of networks in video and web conferencing (including: Integrated Services Digital Network (ISDN), LAN, WAN, VPN, 802.11 a/b/g/n (wireless), Asynchronous Digital Subscriber Lines (ADSL), Synchronous Digital Subscriber Lines (SDSL), 3G/4G mobile networks)
- discuss the impact of video conferencing on society (including: the general public, legislation, education, medicine, business, media)
- describe how data is transmitted and converted in a video conference (including: use of codecs)

7. Expert systems and other types of processing

Candidates should be able to:

- describe the components of an expert system
- explain how the components of an expert system produce possible solutions
- explain how an expert system can be used by organisations
- describe the terms backward chaining and forward chaining
- explain the use of master and transaction files (including in: payroll and customer orders)
- analyse the different types of processing and their uses (including: batch, online (interactive), real time)

8. Spreadsheets

Candidates should be able to:

8.1 Create a spreadsheet

- create structure
 - explain the purpose of cells, rows, columns, ranges, worksheets and multiple worksheets in a single data file
 - insert a row and a column, delete a row and a column, resize a row and a column, hide a row and a column
 - manipulate cells and their content (including: date and time functions; extracting numeric values from strings, concatenating cell content, protecting: cells, rows, columns, worksheets and multiple worksheets in a single data file)
 - adjust cell, row and column width and height
 - freezing panes and windows
- create formatting
 - format cells (including: date, time, text, numeric, currency, percentage, fractions, text orientation, alignment, conditional formatting)
 - format cell emphasis (including: colour, shading, merge, borders, comments)
 - format page (including: page setup, fit to page, margins, header, footer)
- create formulae and functions
 - explain the difference between a formula and a function
 - use formulae (including: add, subtract, multiply, divide, indices)
 - use absolute reference, relative reference, nested formulae, named cells, named ranges
 - explain why absolute and relative referencing are used
 - use functions (including: sum, average, minimum, maximum, integer, rounding, counting, IF, nested IF, lookup (including: vertical, horizontal), INDEX/MATCH, conditional formulae to include counting, sum, average)
- use validation rules (see 1.5)
- test validation applied to a spreadsheet

- test a spreadsheet model and evaluate the effectiveness of test plans for a spreadsheet model
- verify and validate data entry
- extract data
 - search using: text, numeric, date, time, Boolean operators (AND, OR, NOT), >, <, =, >=, <=, contains, starts with, ends with
- sort data (including: ascending, descending) on multiple columns
- import and export data (including: .csv, .txt, .rtf, graphs and charts)
- summarise and display data using pivot tables and pivot charts

8.2 Graphs and charts

- analyse and select the most appropriate type of graph or chart (including: bar chart, pie chart, line graph, comparative bar chart, comparative line graph)
- create a graph or chart (including: appropriate data series, from contiguous data, from non-contiguous data, specified range(s))
 - label a graph or chart (including: title, legend, segment labels, segment values, percentages, category axis labels, series labels, value axis labels, scales, set axis scale maximum, set axis scale minimum)

8.3 Modelling

- use what-if analysis (including: the use of scenarios)
- describe the characteristics of modelling software
- analyse the need for computer models
- evaluate the effectiveness of spreadsheet models (including for: financial forecasting)

8.4 Simulations

- describe the advantages and disadvantages of using a model to create and run simulations
- evaluate the use of simulation (including for: natural disaster planning, pilot training, car driving, nuclear science research)

9. Database and file concepts

Candidates should be able to:

9.1 Create a database

- assign a data type and an appropriate field size to a field (including: text, alphanumeric, numeric (integer, decimal), date/time, Boolean)
- describe the three relationships: one-to-one, one-to-many and many-to-many
- create and use relationships (including: one-to-one and one-to-many)
- create and interpret an entity relationship diagram
- evaluate the difference between a flat file and a relational database and why one might be preferred in certain situations
- create a relational database
- analyse the function of key fields (including: primary key, compound key, foreign key)
- set keys (including: primary key, compound key, foreign key)
- define and use referential integrity and explain its importance

- validate and verify data entry
 - use validation rules (see 1.5)
 - test validation applied to a database
 - verify data entry (see 1.5)
- perform searches
 - simple query on single criterion
 - complex queries using multiple criteria
 - queries using static parameters
 - queries using dynamic parameters
 - nested queries
 - summarise data (including: cross-tab query/pivot table)
 - using text, numeric, date, time, wildcard, Boolean operators (AND, OR, NOT), >, <, =, >=, <=
- use arithmetic operations, numeric and logical functions to perform calculations within a database (including calculated controls and calculated fields)
- sort data
 - ascending, descending, grouped
- design, create and evaluate an appropriate data entry form (including: appropriate font styles and sizes, spacing between fields, character spacing of individual fields, use of white space, radio buttons, drop down menus, highlighting key fields, use form controls, create linked subforms)
- design, create and evaluate database reports including grouped reports
- design, create and evaluate a switchboard/menu within a database
- import data (including: .csv, .txt, .rtf)
- export data (including: table, query, report, export as .csv, .txt, .rtf)

9.2 Normalisation to third normal form (3NF)

- describe the characteristics of data in unnormalised form (ONF), first normal form (1NF), second normal form (2NF) and third normal form (3NF)
- discuss the advantages and disadvantages of normalisation
- normalise a database to 3NF

9.3 Data dictionary

- describe the components of a data dictionary
- select appropriate data types for a given set of data and a given situation
- identify different data types (including: text, alphanumeric, numeric, (integer, real, percentage, currency), date/time, Boolean/logical (yes/no, true/false))

9.4 Query selection

- evaluate the use of static and dynamic parameters in a query (see 9.1)
- analyse when static and dynamic parameters should be used in queries (see 9.1)
- analyse when simple, complex, nested and summary queries (including cross-tab queries/pivot tables) should be used (see 9.1)

9.5 File and data management

- evaluate different file types and their use
- explain what is meant by proprietary and open-source file formats, and why open-source file formats are needed
- explain why generic file formats are needed
- explain the use of indexed sequential access
- explain the use of direct file access
- explain the use of a hierarchical database management system
- describe the features of a management information system (MIS)
- explain how a MIS can be used by organisations

10. Sound and video editing

Candidates should be able to:

- edit a video clip to meet the requirements of its intended application and audience
 - set an aspect ratio
 - trim a video clip to remove unwanted footage
 - join together video clips
 - create text based slides
 - create credits
 - add captions and subtitles
 - add fading effects
 - add animation effects
 - extract a still image from a video clip
 - insert a still image
 - add sound to a video clip
 - remove sound from a video clip
 - alter the speed of a video clip
 - export a video clip in different file formats
 - compress a video to different resolutions to suit different media (including: DVD, internet)
- describe how typical features found in video editing software are used in practice
- edit a sound clip to meet the requirements of its intended application and audience
 - trim a sound clip to remove unwanted material
 - join together two sound clips
 - fade in and fade out a sound clip
 - alter the speed of a sound clip
 - change the pitch of a sound clip
 - add or adjust reverberation
 - overdub a sound clip to include a voice over
 - export a sound clip in different file formats
 - compress (including: the use of MP3) the sound file to different sample rates to suit different media
- describe how typical features found in sound editing software are used in practice
- describe how file sizes depend on sampling rate and sampling resolution

11. Emerging technologies

Candidates should be able to:

- describe emerging technologies (including: 3D printing, 4G and 5G cellular communications, artificial intelligence, augmented reality, biometrics, cloud computing, computer-assisted translation, holographic and 4th generation optical data storage, holographic imaging, quantum cryptography, robotics, QR codes, wearable computing, ultra-high definition television (including: 4K resolution screens) vision enhancement, virtual reality, and their possible uses in different fields, (including: medicine, manufacturing, space exploration)
- evaluate the impact of emerging technologies on individuals and their lifestyles (including: smartphones performing many of the tasks that PCs and laptops perform)
- evaluate the impact of emerging technologies on organisations
- evaluate the impact of emerging technologies on medicine (including: development of prosthetics and medical products, tissue engineering, artificial blood vessels and the design of medical tools and equipment)
- evaluate the impact of emerging technologies on the environment
- discuss the advantages and disadvantages of storing data in the cloud

12. Role and impact of IT in society

Candidates should be able to:

12.1 E-business

- evaluate the impact of information technology on e-business (including: banking, shopping, trading goods)
- describe how it is possible to be subjected to fraud when using credit cards online
- evaluate the impact of digital currency (including: Bitcoin, Litecoin)
- explain how IT is used in e-business (including: electronic funds transfer, automatic stock control, electronic data exchange, business-to-business buying and selling, online stores)
- discuss how organisations mine data to analyse social and economic trends

12.2 Social networking

- evaluate methods used for social networking (including: chat rooms, instant messaging, forums, email, blogs, microblogs) and their impact on changing social patterns

12.3 Video conferencing and teleworking

- describe video conferencing and the hardware and software used
- describe web conferencing and the hardware and software used
- discuss the advantages and disadvantages of video conferencing on employers and employees
- discuss the advantages and disadvantages of web conferencing on employers and employees
- describe teleworking
- discuss the effects of teleworking on employers and employees

12.4 Technology in society

- evaluate the impact of information technology on society (including: sport, manufacturing, medicine, education, banking, e-business)

12.5 Technology enhanced learning

- discuss the advantages and disadvantages of software-based training methods
- evaluate the impact of technology on learning (including: Massive Open Online Courses (MOOC), computer based training, online tutorials, video conferencing)

13. Networks

Candidates should be able to:

13.1 Network components

- describe the role and operations of the following components in a network: switches, hubs, wireless access points, network interface cards, wireless network interface cards, routers, repeaters, gateways, bridge, firewalls (hardware and software) and servers
- describe bandwidth
- describe bit rate
- describe bit streaming (both real time and on demand)
- discuss the importance of bit rates/broadband speed on bit streaming
- describe packet switching, circuit switching and message switching
- describe optical communication/transmission methods (fibre optic, laser), their advantages, disadvantages and their typical applications
- evaluate wireless communication/transmission methods (including: Bluetooth, infrared, WiFi, radio), their advantages, disadvantages and their typical applications
- explain the importance of bandwidth and bit rate when transmitting data
- analyse how different types of communication/transmission media (cables, wireless, optical) govern the bandwidth available for transmitting data
- describe what a protocol is and different types of protocols (including: Wide Area Network protocols and Local Area Network access protocols)
- describe how the BitTorrent protocol provides peer-to-peer file sharing

13.2 Network security

- describe the security issues that could arise from networking computers
- explain how security issues can be prevented on a computer network
- evaluate a range of physical and software based security methods for a computer network
- list the principles of a data protection act
- analyse the need for a data protection act
- evaluate methods for combating IT crime (including: physical security methods, biometric methods, firewalls, back-up, encryption, access rights, malware security, antivirus, anti-spyware)

13.3 Satellite Communication Systems

- describe how Satellite Communication Systems are used and work in data transfer systems, television and radio broadcasting systems and global positioning systems (GPS)
- discuss the advantages and disadvantages of using satellites for data transfer systems, television and radio broadcasting systems, and GPS

14. Project management

Candidates should be able to:

14.1 Stages in project management

- describe the stages of project management from project conception to project close

14.2 Types of project management

- discuss the types of project management software and the advantages and disadvantages of each type

14.3 Project management software

- explain how project management software is used (including: planning, scheduling of tasks, allocation of resources, costings, communications, decision-making)

14.4 Critical path analysis

- describe, interpret and create a critical path analysis

14.5 Gantt charts

- describe, interpret and create a Gantt chart

14.6 Disaster recovery management

- describe disaster recovery management (including: risk analysis, perpetrator analysis, risk testing, quantifying the risk, securing the risk, software protection, password controls, recovery management)

14.7 Prototyping

- describe prototyping
- describe types of prototyping (including: evolutionary, incremental, throw-away, rapid)
- discuss the advantages and disadvantages of prototyping
- describe Rapid Application Development (RAD) and other methods of software development (including: the conventional 'waterfall' method)
- discuss the advantages and disadvantages of rapid application development (RAD)

14.8 CAD/CAM

- evaluate the use of computer-aided design (CAD) and computer-aided manufacturing (CAM)
- describe the uses of computer-aided design (CAD) and computer-aided manufacturing (CAM)
- discuss the benefits and drawbacks of using computer-aided design (CAD) and computer-aided manufacturing (CAM)

15. System life cycle

Candidates should be able to:

15.1 Analysis

- analyse and evaluate different methods of researching a situation (including: questionnaires, interviews, observation, document analysis)
- describe the content of the requirements specification, system specification and design specification

15.2 Design

- identify a flow of data through a system and create a data flow diagram (DFD) and a system flowchart
- design and evaluate data collection forums and screen layouts
- design and evaluate validation routines
- create a data dictionary for a given situation
- evaluate suitable hardware and software for a new system

15.3 Development and testing

- describe the purpose of test data
- explain the purpose of alpha testing
- explain the purpose of beta testing
- analyse the difference between alpha testing and beta testing
- explain the purpose of black box testing
- explain the purpose of white box testing
- analyse the difference between black box testing and white box testing
- explain the importance of testing and having a test plan
- describe how a test plan is created
- create a test plan for a given situation

15.4 Implementation

- describe the different methods of implementing a system (including: parallel running direct changeover, phased implementation, pilot implementation)
- analyse the suitability of an implementation method for a given situation

15.5 Documentation

- design and develop elements of technical documentation
- design and develop elements of user documentation
- explain the need for technical and user documentation

15.6 Evaluation and maintenance

- evaluate a new system in terms of efficiency, ease of use and meeting user requirements
- explain the need for maintenance
- explain perfective, adaptive, preventive and corrective maintenance

16. Graphics creation

Candidates should be able to:

16.1 Vector images

- create a vector image that meets the requirements of its intended application and audience
 - use layers to overlap items
 - use grouping or merging tools
 - use rotation and place an item
 - use transform tools to resize
 - use selection tools to select parts of an image
 - use crop tools to crop part of an image
 - use fill tools to colour items
 - use colour gradients
 - use node editing
 - fit text to a path
 - save an image in different file formats
 - compress an image to different resolutions using file formats (including: .jpg and .png) to suit different media file size requirements

16.2 Bitmap images

- create a bitmap image that meets the requirements of its intended application and audience
 - use layers to overlap items
 - use rotation and place an item
 - use grouping or merging tools
 - use selection tools to select parts of an image
 - use crop tools to crop part of an image
 - use masking tools
 - use tools to improve parts of an image (including: blend, replicate, retouch)
 - use tools to remove red eye
 - use filters (including: blur, distort, sharpen)
 - convert between colour, duotone and black and white images
 - use colour gradients
 - resize an image
 - resize the canvas
 - change the opacity of all or part of an image
 - use text tools to include text
 - save an image in different file formats
 - compress an image to different resolutions using file formats (including: .bmp, .jpg, .png, gif to suit different media file size requirements)
- describe the difference between a bitmap and a vector graphic
- describe how typical features found in bitmapped and vector graphics software are used in practice
- evaluate their suitability for a given scenario
- evaluate the impact of image editing on society (including: media, advertising, fashion, shopping, politics, entertainment)

17. Animation

Candidates should be able to:

- create and evaluate an animation (stop frame and key frame) that meets the requirements of its intended application and audience
 - place objects
 - place an image
 - use frames
 - set key frames
 - use timings
 - use layers
 - show and hide objects
 - resize objects
 - use coordinates to move and place objects
 - understand the use of tweening and what effect it creates
 - use tweening (motion tweening) to create a smooth transition between frames
 - use morphing (shape tweening)
 - understand the use of morphing and what effect it creates
 - use morphing to create a smooth transition between images
 - add text
 - change the opacity of objects and text
 - use masking layers

18. Mail merge

Candidates should be able to:

- create a master document structure (including: standard letter)
- create a source file using appropriate software
- link a master document to a source file, identifying and using correct field names, using conditional operators
- specify rules for managing recipients and contents of a mail merge
- set up fields for manual completion
- create appropriate prompts to the user for manual completion
- use the software to automatically select the required records
- use manual methods and software tools to ensure error-free accuracy
- perform mail merge using the master document and data sources
- create variable fields to control record selection and omission when merging
- explain why mail merge documents are created

19. Programming for the web

It is recommended that for this section of the syllabus, candidates should have a working knowledge of html and css, (for example, have studied website authoring in Cambridge IGCSE Information and Communication Technology, syllabus 0417).

Candidates should be able to use JavaScript to:

- demonstrate a range of object-based programming techniques
 - recognise data types (including: number, string, Boolean, array, object)
 - assign and understand the term variables
 - carry out calculations and basic string manipulation
 - use arrays
 - use comparison and logical operators
 - use conditional statements (including: if, else, else if, switch)
 - use loops (including: for, for/in, while, do/while)
 - use iterative methods
 - create functions
 - trap errors
 - control events
 - create html forms to interact with the user
 - add comments to explain JavaScript code
- output/display data to:
 - HTML documents
 - HTML elements
 - alert boxes
 - the browser console
- add interactivity to webpages
- explain JavaScript terms and programming techniques

4. Description of components

Paper 1 Theory

This is a compulsory written paper which tests sections 1–10 of the syllabus content. Each examination paper consists of short-answer and structured questions of variable mark value. Candidates must answer all questions. Candidates answer on the question paper.

Paper 2 Practical

This is a compulsory practical paper which tests sections 8–10 of the syllabus content. Candidates perform practical tasks within a structured problem-solving context and submit their work electronically. They will also need to apply their knowledge from sections 1–7 of the syllabus content. Candidates must answer all questions. Candidates **must not** have access to the internet or email. Candidates will work with electronic resource files provided by Cambridge. These files must be loaded onto the candidates' computer system before the start of the examination.

Work must be saved in the correct file format as stated in the tasks. If work is saved in an incorrect file format, candidates will **not** receive marks for that task.

Details of how to administer the practical paper can be found in the *Cambridge Administrative Guide*, which is available from the Exams Officer section of our website: www.cie.org.uk/examsofficers

Paper 3 Advanced Theory

This is a compulsory written paper which tests sections 11–19 of the syllabus content. The content of sections 1–10 is assumed knowledge. Each examination paper consists of a variable number of short-answer and structured questions of variable mark value. Candidates must answer all questions. Candidates answer on the question paper.

Paper 4 Advanced Practical

This is a compulsory practical paper which tests sections 16–19 of the syllabus content. The exam also includes practical tasks from sections 8–9 within a problem-solving context. Candidates perform practical tasks and submit their work electronically. Candidates apply this knowledge from all sections of the syllabus. Candidates must answer all questions. Candidates **must not** have access to the internet or email. Candidates will work with electronic resource files provided by Cambridge. These files must be loaded onto the candidates' computer system before the start of the examination.

Work must be saved in the correct file format as stated in the tasks. If work is saved in an incorrect file format, candidates will **not** receive marks for that task.

Details of how to administer the practical paper can be found in the *Cambridge Administrative Guide*, which is available from the Exams Officer section of our website: www.cie.org.uk/examsofficers

5. Glossary of command words

This glossary should prove helpful to candidates as a guide, although it is not exhaustive and it has deliberately been kept brief. The number of marks allocated for any part of a question is a guide to the depth required for the answer.

Command word	What it means
Analyse	explain the main points or effectiveness in detail, identify their characteristics, examine closely
Annotate	add an explanatory note
Calculate	work out the value of something
Compare	identify similarities
Complete	finish a task by adding to given information
Contrast	identify differences
Create	produce
Define	specify meaning
Describe	set out characteristics
Discuss	give the important arguments for and against, often requires a conclusion; this command word requires 'Analysis' and 'Evaluation'
Enter	put in information
Evaluate	discuss the importance of, weigh up the advantages and disadvantages, judge the overall effectiveness, weigh up your opinions
Examine	investigate closely
Explain	set out purposes or reasons
Export	send data file from one piece of software to another piece of software
Extract	take out
Format	determine features
Give	produce an answer from recall
Identify	name or otherwise characterise
Import	insert data file from one piece of software to another piece of software
Insert	add new data item to file
Merge	combine into single structure
Name	identify or specify
Open	access a file
Perform	carry out
Prepare	make ready
Provide	supply
Replicate	copy formula from one cell to another
Round	write a value as whole number/number of specified decimal places
Set	fix format as
Sort	put in order, including ascending or descending
State	express in clear terms
Suggest	present a possible case

6. Other information

Equality and inclusion

Cambridge International Examinations has taken great care in the preparation of this syllabus and related assessment materials to avoid bias of any kind. To comply with the UK Equality Act (2010), Cambridge has designed this qualification with the aim of avoiding direct and indirect discrimination.

The standard assessment arrangements may present unnecessary barriers for candidates with disabilities or learning difficulties. Arrangements can be put in place for these candidates to enable them to access the assessments and receive recognition of their attainment. Access arrangements will not be agreed if they give candidates an unfair advantage over others or if they compromise the standards being assessed. Candidates who are unable to access the assessment of any component may be eligible to receive an award based on the parts of the assessment they have taken.

Information on access arrangements is found in the *Cambridge Handbook*, which can be downloaded from the website www.cie.org.uk/examsOfficers

Language

This syllabus and the associated assessment materials are available in English only.

Grading and reporting

Cambridge International A Level results are shown by one of the grades A*, A, B, C, D or E, indicating the standard achieved, A* being the highest and E the lowest. 'Ungraded' indicates that the candidate's performance fell short of the standard required for grade E. 'Ungraded' will be reported on the statement of results but not on the certificate. The letters Q (result pending), X (no result) and Y (to be issued) may also appear on the statement of results but not on the certificate.

Cambridge International AS Level results are shown by one of the grades a, b, c, d or e, indicating the standard achieved, 'a' being the highest and 'e' the lowest. 'Ungraded' indicates that the candidate's performance fell short of the standard required for grade 'e'. 'Ungraded' will be reported on the statement of results but not on the certificate. The letters Q (result pending), X (no results) and Y (to be issued) may also appear on the statement of results but not on the certificate.

If a candidate takes a Cambridge International A Level and fails to achieve grade E or higher, a Cambridge International AS Level grade will be awarded if both of the following apply:

- the components taken for the Cambridge International A Level by the candidate in that series included all the components making up a Cambridge International AS Level
- the candidate's performance on these components was sufficient to merit the award of a Cambridge International AS Level grade.

Entry codes

To maintain the security of our examinations, we produce question papers for different areas of the world, known as 'administrative zones'. Where the entry code has two digits, the first digit is the component number given in the syllabus. The second digit is the location code, specific to an administrative zone.

Entry codes and instructions for making entries can be found in the *Cambridge Guide to Making Entries*. Other exams administration documents, including timetables and administrative instructions, can be found at www.cie.org.uk/examsOfficers

Continued from inside front cover

Changes to version 4 of the syllabus, published May 2016

Changes have been made to page 2

The availability table has been amended to show the availability of 9713 in March 2017 for India only.

Syllabus code	Papers	Mar 16	Jun 16	Nov 16	Mar 17	Jun 17	Nov 17	Mar 18	Jun 18	Nov 18	Mar 19	Jun 19	Nov 19
OLD – 9713	AS	✓	✓	✓	✓	✓	✓						
	AL	✓	✓	✓	✓	✓	✓						
NEW – 9626	AS				✓	✓	✓	✓	✓	✓	✓	✓	✓
	AL				✓	✓	✓	✓	✓	✓	✓	✓	✓

Changes to previous versions of the syllabus

The significant changes in Version 1 of the syllabus, released February 2015, are indicated by single black vertical lines on either side of the text.

Teachers are strongly advised to read the whole syllabus before planning their teaching programme.

Change of syllabus code and name

- **9626** replaces syllabus 9713 for examination from 2017 onwards. The name '**Information Technology**' replaces 'Applied Information and Communication Technology'. The new syllabus name is to better reflect the updated subject content.

Key concepts

- The section 'Why Cambridge International AS and A Level Information Technology?' (see pages 7–8) sets out the key concepts that this syllabus is designed to develop.

Syllabus aims

The syllabus aims have been updated (see section 2.1).

Syllabus content changes

The content has been reviewed and reorganised. In particular:

- New content includes:
 - Data, information, knowledge and processing
 - Sound and video editing
 - Graphics creation
 - Animation
 - Programming for the web
- Content that has been moved from AS Level to A Level:
 - System life cycle

Assessment changes

- The assessment objectives have been revised from two to three (see section 2.2).
- The weighting of components (see section 1.2) has changed. The relationship between assessment objectives and components (see section 2.3) and assessment objectives and qualifications have changed (see section 2.4).
- **Paper 1** Theory and **Paper 3** Advanced Theory are now 1 hour 45 minutes each. The number of marks has been increased for each paper from 80 marks to 90 marks.
- **Paper 2** Practical and **Paper 4** Advanced Practical remain at 2 hours 30 minutes each. The number of marks for Paper 2 has been reduced from 120 marks to 110 marks. The number of marks for Paper 4 has been increased from 90 marks to 110 marks.
- A glossary of command words is included (see section 5).

Availability by exam series

If your candidates studied the 2016 syllabus (9713) please be aware of the following:

- Assessments begin for the revised syllabus (9626) in the 2017 examination series. For information about assessment opportunities for 9713, please see the subject page for the 9713 syllabus at www.cie.org.uk/alevel for more information.

The table below shows availability of the syllabuses.

Syllabus code	Papers	Mar 16	Jun 16	Nov 16	Mar 17	Jun 17	Nov 17	Mar 18	Jun 18	Nov 18	Mar 19	Jun 19	Nov 19
OLD – 9713	AS	✓	✓	✓		✓	✓						
	AL	✓	✓	✓		✓	✓						
NEW – 9626	AS				✓	✓	✓	✓	✓	✓	✓	✓	✓
	AL				✓	✓	✓	✓	✓	✓	✓	✓	✓

Changes have been made to page 20:

The heading for Section 7 has changed to:

7. Expert systems and other types of processing

The final bullet for Section 7 should read:

- analyse the different types of processing and their uses (including: batch, online (interactive), real time)

Changes have been made to page 22:

Section 9.1

Immediately after the fourth bullet point insert a further bullet point:

- design, create and evaluate database reports including grouped reports

Changes have been made to page 32:

Section 5 Glossary of terms

Evaluate – now reads:

discuss the importance of, weigh up the advantages and disadvantages, judge the overall effectiveness, weigh up your opinions
