### **CAMBRIDGE INTERNATIONAL EXAMINATIONS**

**International General Certificate of Secondary Education** 

# MARK SCHEME for the May/June 2013 series

# 0625 PHYSICS

0625/31

Paper 3 (Extended Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

#### NOTES ABOUT MARK SCHEME SYMBOLS & OTHER MATTERS

M marks

are method marks upon which further marks depend. For an M mark to be scored, the point to which it refers must be seen in a candidate's answer. If a candidate fails to score a particular M mark, then none of the dependent marks can be scored.

B marks

are independent marks, which do not depend on other marks. For a B mark to be scored, the point to which it refers must be seen specifically in the candidate's answers.

A marks

In general A marks are awarded for final answers to numerical questions.

If a final numerical answer, eligible for A marks, is correct, with the correct unit and an acceptable number of significant figures, all the marks for that question are normally awarded.

It is very occasionally possible to arrive at a correct answer by an entirely wrong approach. In these rare circumstances, do not award the A marks, but award C marks on their merits. However, correct numerical answers with no working shown gain all the marks available.

C marks

are compensatory marks in general applicable to numerical questions. These can be scored even if the point to which they refer are not written down by the candidate, provided subsequent working gives evidence that they must have known it. For example, if an equation carries a C mark and the candidate does not write down the actual equation but does correct substitution or working which shows he knew the equation, then the C mark is scored. A C mark is not awarded if a candidate makes two points which contradict each other. Points which are wrong but irrelevant are ignored.

brackets () around words or units in the mark scheme are intended to indicate wording used to clarify the mark scheme, but the marks do not depend on seeing the words or units in brackets, e.g. 10 (J) means that the mark is scored for 10, regardless of the unit given.

underlining indicates that this must be seen in the answer offered, or something very similar.

OR / or indicates alternative answers, any one of which is satisfactory for scoring the marks.

means 'each error or omission'. e.e.o.o.

means 'or words to that effect'. o.w.t.t.e.

Spelling

Be generous about spelling and use of English. If an answer can be understood to mean what we want, give credit. However, beware of and do not allow ambiguities, accidental or deliberate; e.g. spelling which suggests confusion between reflection / refraction / diffraction / thermistor / transistor / transformer.

Not/NOT

Indicates that an incorrect answer is not to be disregarded, but cancels another otherwise correct alternative offered by the candidate i.e. right plus wrong penalty applies.

Ignore

Indicates that something which is not correct or irrelevant is to be disregarded and does not cause a right plus wrong penalty.

Page 3	Mark Scheme	Syllabus	Paper
	IGCSE – May/June 2013	0625	31

e.c.f. meaning 'error carried forward' is mainly applicable to numerical questions, but may in particular circumstances be applied in non-numerical questions.

This indicates that if a candidate has made an earlier mistake and has carried an incorrect value forward to subsequent stages of working, marks indicated by ecf may be awarded, provided the subsequent working is correct, bearing in mind the earlier mistake. This prevents a candidate being penalised more than once for a particular mistake, but **only** applies to marks annotated e.c.f.

## Significant Figures

Answers are normally acceptable to any number of significant figures  $\dot{u}$  2. Accept answers that round to give the correct answer to 2 s.f. Any exceptions to this general rule will be specified in the mark scheme.

Units Deduct one mark for each incorrect or missing unit from a final answer that would otherwise gain all the marks available for that answer: maximum 1 per question.

#### Arithmetic errors

Deduct one mark if the **only** error in arriving at a final answer is clearly an arithmetic one.

### Transcription errors

Deduct one mark if the only error in arriving at a final answer is because given or previously calculated data has clearly been misread but used correctly.

Fractions e.g.  $\frac{1}{2}$ ,  $\frac{1}{10}$  etc. are only acceptable where specified.

				IGCSE – May/June 2013	0625	31
10	` arrows o		ows cl	concentric circles centred on wire ockwise on each circle / at least one circle of circles increasing as radius increases		B1 B1 B1
	(b)	(i)	arrov	w pointing down on side AB, up on side CD		B1
		(ii)	line ( OR h	es on AB and CD are opposite OR up and down and (so cause rotation) have moments in same sense / direction cause couple / torque	d separated / not	in same B1
	(iii)		OR k	every half turn when AB and CD swap sides		
			OR s	nat: ion continues (in same direction) so that rotation doesn't reverse its direction o maintain sense/direction of moments/couple coil turns more than half a revolution		В1
						[Total 7]
11	(a) (i)			otons utrons		B1 B1
		(ii)	a (fa	st moving) electron		B1
	(b) election (c) (i) (ii)		ctron/	electrons removed from/gained by the molecule		В1
			OR t	e because particle is charged he force on the particles is perpendicular to their pa direction of force changes as direction of motion cha		B1
			α-ра	article <u>curve</u> up the page in at least half of width of f	ïeld	B1
				article $\underline{\text{curve}}$ opposite to $\alpha$ -particle curve OR down pature anywhere	page if $\alpha$ line has	no B1
				ller radius of β path clear		B1
						[Total 8]
