This document consists of **15** printed pages and **1** blank page.

For Examiner's Use

1 Fig. 1.1 shows the path of one drop of water in the jet from a powerful hose.

Fig. 1.2 is a graph of speed against time for the water drop shown in Fig. 1.1.

Fig. 1.2

(a) Describe the movement of the water drop in the first 4 s after leaving the hose.

.....[2]

(b)	Use	Fig. 1.2 to find	For
	(i)	the speed of the water leaving the hose,	Examiner's Use
		speed =	
	(ii)	the time when the speed of the water is least.	
		time =[2]	
(c)		values from Fig. 1.2 to calculate the acceleration of the drop as it falls back towards ground. Show your working.	
		acceleration =[3]	
(d)	Cal	culate the greatest distance above the ground reached by the drop.	
		distance =[3]	

**2** Fig. 2.1 shows a reservoir that stores water.

(a) The valve in the exit pipe is closed. The density of water is 1000 kg/m<sup>3</sup> and the acceleration of free fall is 10 m/s<sup>2</sup>.
 Calculate the pressure of the water acting on the closed valve in the exit pipe.

pressure = .....[2]

(b) The cross-sectional area of the pipe is  $0.5 \, \text{m}^2$ . Calculate the force exerted by the water on the closed valve.

force = .....[2]

(c) The value is then opened and water, originally at the surface of the reservoir, finally flows out of the exit pipe. State the energy transformation of this water between the surface of the reservoir and the open end of the pipe.

.....[2]

For Examiner's Use

- **3** A scientist needs to find the density of a sample of rock whilst down a mine. He has only a spring balance, a measuring cylinder, some water and some thread.
  - (a) In the space below, draw two labelled diagrams, one to show the spring balance being used and the other to show the measuring cylinder being used with a suitable rock sample. [2]

For Examiner's Use

(b) The spring balance is calibrated in newtons. State how the mass of the rock sample may be found from the reading of the spring balance.
[1]
(c) State the readings that would be taken from the measuring cylinder.
[1]
(d) State how the volume of the rock would be found from the readings.
[1]
(e) State in words the formula that would be used to find the density of the sample.

density =

[1]

**4** (a) Fig. 4.1 shows a simple type of thermocouple that has been calibrated to measure temperature.

For Examiner's Use

(i) Describe how the thermocouple could be used to measure the temperature of a beaker of hot water.

(ii) State two situations where a thermocouple would be a good choice of thermometer to measure temperature.
1.
2.

6

(b) A mercury-in-glass thermometer is placed in an insulated beaker of water at 60 °C. The water is heated at a constant rate. The temperature of the water is measured and Examiner's recorded on the graph shown in Fig. 4.2.

100 80 temperature/°C 60 40 20 0 Ò 5 10 15 20 time/min Fig. 4.2 State the effect of the heat supplied during the period 0 to 5 minutes, (i) ..... .....

(ii) during the period 10 to 15 minutes. .....

. . . . .

[2]

For

Use

**5** (a) Fig. 5.1 shows a sealed box.

## Fig. 5.1

- (i) The box contains a large number of air molecules. On Fig. 5.1, draw a possible path of **one** of the air molecules, as it moves inside the box.
- (ii) Explain
  - 1 how air molecules in the box create a pressure on the inside walls,

2 why this pressure rises as the temperature of the air in the box increases.

[5]

For Examiner's Use

(b) Air in a cylinder is compressed slowly, so that the temperature does not rise. The pressure changes from  $2.0 \times 10^5$  Pa to  $5.0 \times 10^5$  Pa. The original volume was  $0.35 \text{ m}^3$ . Calculate the new volume.

volume = .....[3]

**7** Fig. 7.1 shows a 12 V battery connected to a number of resistors.

(d)	Wha	at will be the reading on a voltmeter connected across	For
	(i)	the two 4 $\Omega$ resistors,	Examiner's Use
	(ii)	reading = one 5 $\Omega$ resistor? reading =	
(e)	The	[2] 8 $\Omega$ resistor is made from a length of resistance wire of uniform cross-sectional area.	
	Stat	te the effect on the resistance of the wire of using	
	(i)	the same length of the same material with a greater cross-sectional area,	
	(ii)	a smaller length of the same material with the same cross-sectional area.	
		[2]	

**8** Fig. 8.1 shows plane waves passing through a gap in a barrier that is approximately equal to the wavelength of the waves.

For Examiner's Use

(a) What is the name given to the wave property shown in Fig. 8.1?

.....[1]

(b) In the space below, carefully draw the pattern that would be obtained if the gap were increased to six times the wavelength of the waves. [4]

(c) The effect in Fig. 8.1 is often shown using water waves on the surface of a tank of water. These are transverse waves. Explain what is meant by a *transverse* wave.

.....[2]

ava	ilable.
(i)	In the space below, draw a labelled diagram of a transformer suitable for producing the required supply voltage.
(ii)	Suggest suitable numbers of turns for the coils.
<b>(b)</b> The	[4] e power needed for this model engine is 12 W. Calculate the current taken from the
	ns when just this engine is in use, assuming that the transformer is 100% efficient.
	current =[2]
<b>(c)</b> Exp	lain why transformers will only work when connected to an a.c. supply.
	[2]

For Examiner's Use

9

10 (a) (i) What is the function of a transistor when placed in an electrical circuit? For Examiner's Use (ii) Describe the action of a transistor. ..... ..... [3] (b) (i) In the space below, draw the symbol for an OR gate. Label the inputs and the output. [1] Describe the action of an OR gate that has two inputs. (ii) ..... .....[2]

- **11 (a)** The decay of a nucleus of radium  ${}^{226}_{88}$ Ra leads to the emission of an  $\alpha$ -particle and leaves behind a nucleus of radon (Rn). In the space below, write an equation to show this decay. [2]
  - (b) In an experiment to find the range of  $\alpha$ -particles in air, the apparatus in Fig. 11.1 was used.

The results of this experiment are shown below.

count rate / (counts/minute)		562	441	382	317	20	19	21	19
distance from source to detector/cm	1	2	3	4	5	6	7	8	9

(i) State what causes the count rate 9 cm from the source.
(ii) Estimate the count rate that is due to the source at a distance of 2 cm.
(iii) Suggest a value for the maximum distance that α-particles can travel from the source.
(iv) Justify your answer to (iii).
