UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS
International General Certificate of Secondary Education

CANDIDATE NAME

CENTRE NUMBER | | | | | |

CANDIDATE NUMBER | | | | |

PHYSICAL SCIENCE **0652/03**

Paper 3 (Extended) **October/November 2010**

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.
Write in dark blue or black pen.
You may use a soft pencil for any diagrams, graphs, tables or rough working.
Do not use staples, paper clips, highlighters, glue or correction fluid.
DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions.
A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question.

This document consists of **17** printed pages and **3** blank pages.

For Examiner's Use

1 Fig. 1.1 shows apparatus used to react dilute solutions of sodium hydroxide and sulfuric acid.

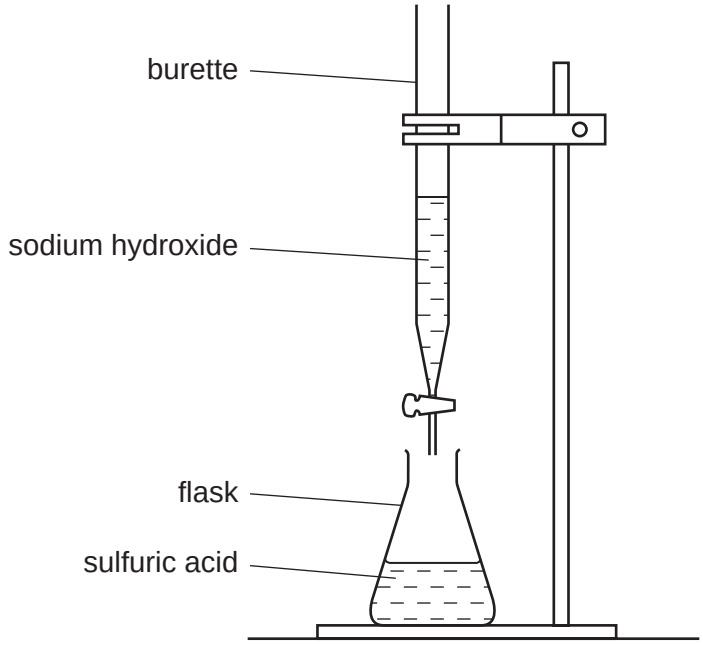

Fig. 1.1

(a) Sodium hydroxide is added slowly from the burette to the flask until in it is in excess.

(i) Suggest a value for the pH of the acid before any sodium hydroxide solution is added.

pH = ... [1]

(ii) Describe the changes in the pH of the liquid in the flask as the sodium hydroxide is added until in excess.

.....

.....

.....

..... [2]

(iii) Suggest how you could observe the change in pH.

..... [1]

(iv) Write a balanced equation for the reaction that takes place.

..... [2]

(b) During the reaction protons are transferred from one reagent to the other.

Identify the source of the protons and explain what is happening.

.....

.....

.....

.....

..... [3]

For Examiner's Use

2 Fig. 2.1 shows a side view of a shallow pool.

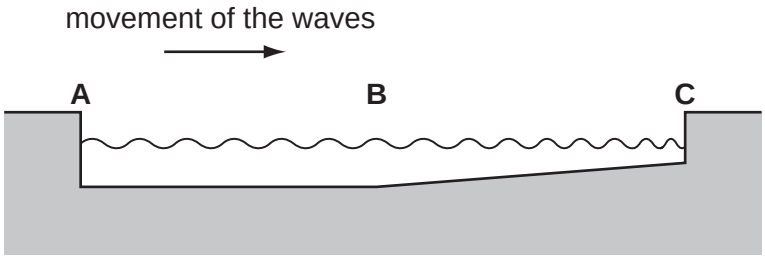

Fig 2.1

Some waves move across the surface of the water.

(a) (i) Mark on the diagram, between **A** and **B**, **one** wavelength of the waves. [1]

(ii) Explain why the wavelength of the waves changes as the waves go across the pool from **B** to **C**.

.....

.....

..... [2]

(b) The wavelength of the waves between **A** and **B** is 12 cm. They move across the pool at a speed of 90 cm/s.

Calculate the frequency of these waves.

Show your working.

frequency ..... [2]

(c) When the pool is perfectly calm, a boy observes that an image of a lamp is formed as shown in Fig. 2.2.

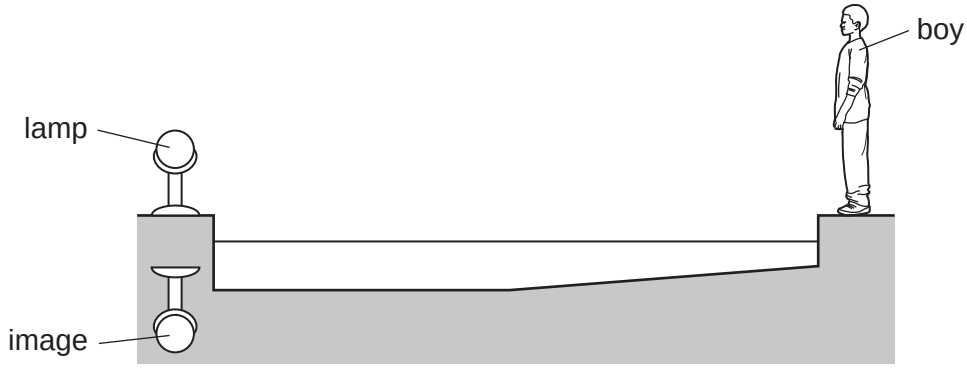

Fig. 2.2

(i) On Fig. 2.2, draw a ray from the lamp to the boy's eye to show how the image is formed. [2]

A breeze blows and ripples form. The appearance of the side view of the surface of the pool is shown in Fig. 2.3.

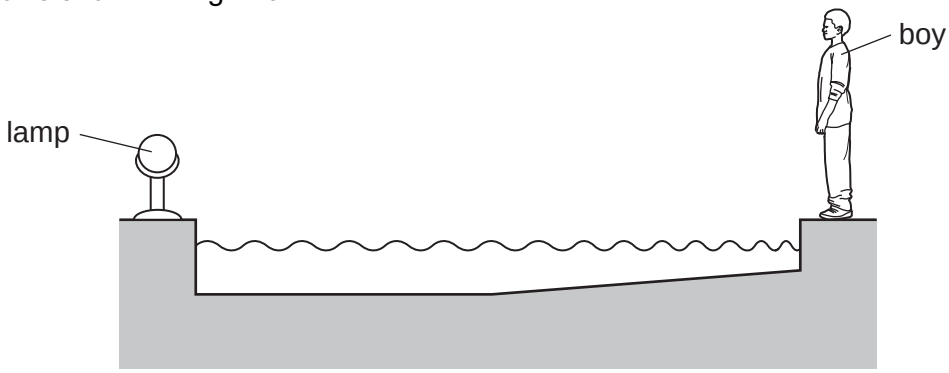

Fig. 2.3

(ii) Explain why a single image of the lamp is no longer seen. Draw suitable rays on Fig. 2.3 to help with your explanation.

.....

.....

..... [3]

For Examiner's Use

3 Ethanol can be made by two different processes:

- fermentation,
- addition of steam to ethene.

(a) (i) Describe how ethanol is made by fermentation.

.....

.....

.....

.....

..... [3]

(ii) Complete and balance this equation to show the formation of ethanol by fermentation.

$C_6H_{12}O_6 \rightarrow$ ..... [2]

(b) Steam is reacted with ethene according to this equation.

$$C_2H_4 + H_2O \rightarrow C_2H_5OH$$

Calculate the volume of ethene, measured at room temperature and pressure, which reacts to produce 1.0 dm^3 of ethanol.

Ethanol has a density of 0.8 kg/dm^3.

[A_r: C, 12; H,1; O,16.]

[At room temperature and pressure 1 mole of any gas has a volume of 24 dm^3.]

Show your working.

volume of ethene = ... dm^3 [4]

(c) Ethene is made by the cracking of hydrocarbons obtained from crude oil.

Describe this process.

.....

.....

.....

.....

..... [3]

For Examiner's Use

For Examiner's Use

4 Fig. 4.1 shows two conducting spheres. Sphere **B** is connected to earth through a sensitive ammeter. Sphere **A** has a very large positive charge on it. When sphere **B** is brought near to **A**, a spark jumps between the two spheres and the ammeter needle moves rapidly up the scale and then back to zero.

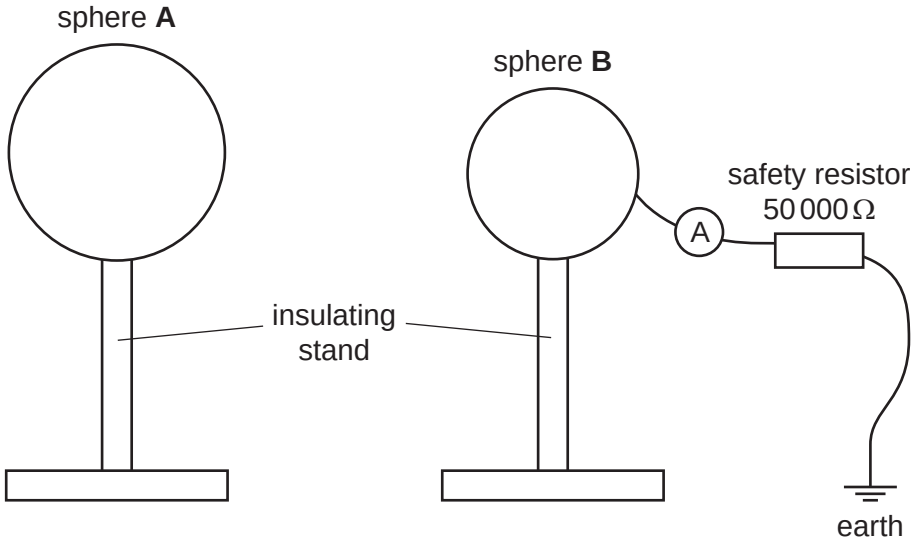

Fig. 4.1

(a) (i) Explain why the ammeter needle moves.

.....

.....

..... [2]

(ii) Describe the energy changes that occur when the spark jumps between the two spheres.

.....

.....

..... [3]

(b) (i) The average current through the ammeter is 0.0012 mA.

Calculate the average potential difference across the safety resistor.

potential difference = ... [2]

For Examiner's Use

(ii) The current lasts for 1.5 ms.

Calculate the charge which flows through the ammeter.

charge = ... [2]

(iii) Calculate the energy transferred in the resistor.

energy = ... [2]

5 Table 5.1 shows the elements in a period of the Periodic Table.

For Examiner's Use

Table 5.1

group	I	II	III	IV	V	VI	VII
element	Li	Be	B	C	N	O	F

(a) Describe the relationship between group number and the number of outer shell electrons in the atoms of these seven elements.

.... [1]

(b) Describe how the character of the elements changes from left to right across these seven elements.

....

.... [1]

(c) Lithium forms an ion Li^{+}. Oxygen forms an ion O^{2-}.

(i) What is the formula for the ionic compound lithium oxide?

.... [1]

(ii) Describe, in terms of electrons, how lithium and oxygen atoms form the compound lithium oxide.

....

....

....

....

.... [3]

(d) In the box below, draw a diagram to show the arrangement of all electrons in a molecule of nitrogen.

For Examiner's Use

[3]

For Examiner's Use

6 Jane is given a radioactive source. She finds out what type or types of radiation it emits.

(a) Describe **one** safety precaution she must take when using the source.

.....

..... [1]

(b) She sets up a GM-tube and finds there is a count of 12 in one minute with no source present. State why there is a count with no source present.

.....

..... [1]

(c) She places the source a few centimetres from the GM-tube. Table 6.1 shows the results she obtains using different absorbers between the GM-tube and the source.

Table 6.1

absorber	reading 1 / counts per minute	reading 2 / counts per minute	reading 3 / counts per minute
none	4352	4429	4388
thin card	1265	1321	1272
2 mm aluminium	1269	1247	1285
4 cm lead	33	45	37

(i) Explain why, when there is no absorber present, the readings vary.

.....

..... [1]

(ii) Complete Table 6.2 and indicate whether each of the three types of radiation are present or absent. Use the evidence from Table 6.1 to explain the presence or absence of each of the three types of radiation.

Table 6.2

type of radiation	present (✓) absent (×)	reason
alpha		
beta		
gamma		

[4]

(d) In a research project a small amount of an alpha emitting isotope is injected into a cancerous tumour in a mouse.

(i) Suggest why alpha radiation might be especially effective at destroying tumours.

.....

.....

..... [2]

(ii) Explain why a beam of alpha particles is not aimed at the tumour from outside the body of the mouse.

.....

..... [2]

For Examiner's Use

7 Fig. 7.1 shows a blast furnace producing iron from iron ore.

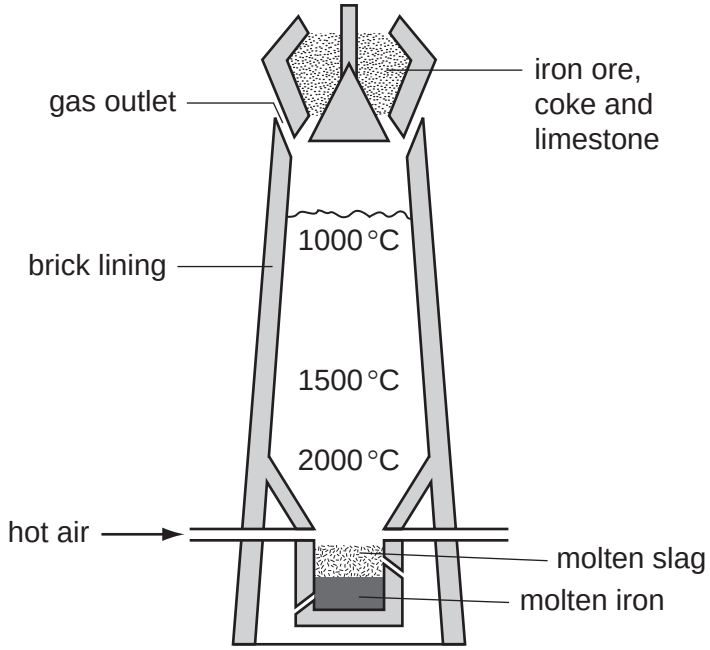

Fig. 7.1

In the blast furnace iron(III) oxide is reduced by carbon monoxide to produce iron metal.

$$Fe_2O_3 + 3CO \rightarrow 2Fe + 3CO_2$$

(a) Carbon monoxide is formed from coke in two stages in the blast furnace.

(i) Describe the **two** stages to show how carbon monoxide is formed in the blast furnace.

stage 1 .....

.....

stage 2 .....

..... [2]

(ii) Write balanced equations for the **two** stages that are involved in this formation of carbon monoxide.

stage 1 .....

stage 2 ..... [2]

For Examiner's Use

(b) A blast furnace produces 60 000 tonnes of iron per week.

Calculate the mass of iron(III) oxide used to produce this iron.

[A_r: Fe, 56; O,16.]

mass = ... tonnes [3]

(c) Mild steel and stainless steel are two alloys of iron.

(i) How are alloys of iron produced?

.....

..... [1]

(ii) Give a reason for producing alloys of iron.

.....

..... [1]

(d) Aluminium ore contains aluminium oxide, Al_2O_3.

Why is aluminium **not** extracted from this ore using a blast furnace?

.....

..... [1]

For Examiner's Use

8 A student measures the density of an irregularly shaped stone.

(a) (i) Name **two** pieces of apparatus he might use.

1. .....

2. ..... [2]

(ii) State the measurements he makes.

.....

.....

..... [2]

(iii) Explain how he uses his results to find the density of the stone.

.....

.....

..... [2]

(b) A beaker contains 280 g of sea water, which has a density of 1.12 g/cm^3.

Calculate the volume of sea water in the beaker.

volume = ... cm^3 [2]
