0654/03

Paper 3

October/November 2005

2 hours

Candidates answer on the Question Paper. No Additional Materials are required.

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen in the spaces provided on the Question Paper. You may use a soft pencil for any diagrams, graphs, tables or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid.

Answer all questions.

The number of marks is given in brackets [ ] at the end of each question or part question. A copy of the Periodic Table is printed on page 20.

If you have been given a label, look at the details. If any details are incorrect or missing, please fill in your correct details in the space given at the top of this page.

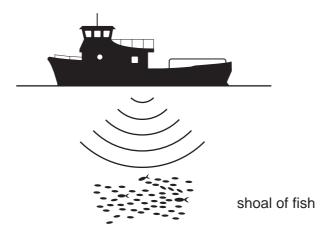

Stick your personal label here, if provided.

This document consists of 20 printed pages.

1	(a)	Exp	lain wha					to be a second her primary cold	
		ехр	lanation						
		prin	nary colo	our					
		sec	ondary o	colour					[3]
	(b)	Belo	ow is a li	st of some v	vaves.				
				gamma		infra-red	radio	sound	
				ultrasoun	d	ultraviolet	visible ligh	t	
		Wri	te down	<b>one</b> wave fr	om the I	list that is			
		(i)	a trans	verse wave,					
									[1]
		(ii)	a longit	udinal wave,	,				
									[1]
	(	(iii)	emitted	by hot object	cts but c	annot be see	n by the huma	n eye.	
									[1]

(c) A fishing boat uses echo sounding to detect a shoal of fish.

Short pulses of high frequency sound are sent out from the boat and the echo from the shoal of fish is detected 0.2 seconds later.

Sound waves travel through water at a speed of 1600 m/s.

(i)	Calculate th	e distance	that the	shoal of	fish is	below	the	boat
-----	--------------	------------	----------	----------	---------	-------	-----	------

Show your working and state the formula that you use.

formula used

working

[2]

(ii) The sound waves have a wavelength of 0.2 m. Calculate the frequency of the waves.

Show your working and state the formula that you use.

**2** (a) Fig. 2.1 shows a vertical section through a human heart.

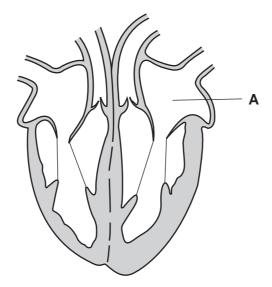

Fig. 2.1

	(i)	Name the part labelled <b>A</b> .	
			[1]
	(ii)	Using a labelling line and the letter <b>M</b> , label the muscular wall of the left ventricle.	[1]
(b)		e muscular walls of the heart are supplied with oxygen by blood that flows throu coronary arteries.	ıgh
		plain why a person may suffer a heart attack if one of the coronary arteries becom cked.	ıes
			[3]

(c) Table 2.1 shows part of a chart that doctors in New Zealand use to estimate the chances of a woman having a heart attack.

Table 2.1

	percenta	age of wom	nen who ai	re expecte	d to have a	a heart att	ack within	5 years
	age	40	age	50	age	60	age	70
	no diabetes	with diabetes	no diabetes	with diabetes	no diabetes	with diabetes	no diabetes	with diabetes
non-smokers	1	3	3	7	5	12	7	23
smokers	4	7	6	13	12	22	15	33

(i)	Use the information in Table 2.1 to describe how a woman's age affects her chances of having a heart attack, if she does not have diabetes and does not smoke.
	[2]
(ii)	Imagine that you are a doctor. A woman smoker with diabetes asks you how she can improve her chances of living a long and healthy life.
	Explain how you would use the <b>information in Table 2.1</b> to explain to her why it is very important that she should give up smoking.
	[3]
(iii)	State <b>one</b> step that the woman could take, other than giving up smoking, which might reduce her chances of having a heart attack.
	[1]

[1]

3 The chemical symbol of the element lithium is shown below.

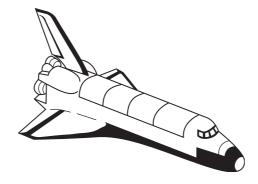

(a) (i) State the number of electron shells (energy levels) in a lithium atom.

- (ii) Lithium is obtained as the free element by electrolysis of molten lithium chloride, LiC *l*.

  Explain briefly how lithium ions, Li<sup>+</sup>, become atoms at the cathode in this process.
- (b) Lithium reacts with water according to the symbolic equation below.

Explain why fire-fighters must **not** use water to try to extinguish burning lithium.

(c) Lithium hydroxide crystals are used in manned space vehicles to remove carbon dioxide gas from the air exhaled by the astronauts.

The symbolic equation for this reaction is

2LiOH + 
$$CO_2$$
  $\longrightarrow$   $Li_2CO_3$  +  $H_2O$ 

(i)	The formula and charge of a lithium ion is Li <sup>+</sup> . Deduce the formula and charge of the carbonate ion. Explain your answer.
	[2]
(ii)	A space vehicle carries a crew of 7 astronauts. Each astronaut exhales 18 moles of carbon dioxide every day.
	Calculate the total number of moles of carbon dioxide that the crew will exhale during a mission into space which lasts 10 days. Show your working.
	[2]
iii)	Calculate the mass of lithium hydroxide crystals which must be loaded on board the space vehicle to react with all the carbon dioxide exhaled during the mission. Show your working.
	[3]
iv)	Suggest why lithium hydroxide and not the hydroxide of any of the other Group 1 metals is used on the space vehicle.
	[2]

**4** Fig. 4.1 shows a flying squirrel. A flying squirrel uses large flaps of skin as a form of parachute to enable it to fall, glide and land safely. The air trapped under these flaps, as the squirrel falls, provides an upward force called air resistance.

		Fig. 4.1
(a)	(i)	As the squirrel starts to fall, it is accelerating.
		State the meaning of the term accelerating.
		[1]
	(ii)	The squirrel weighs 20 N. Suggest a value for the air resistance while the squirrel is
	(11)	accelerating.
		air resistance N
		Explain your answer.
		[2]
	(iii)	At one point as the squirrel falls, the resultant downward force on the squirrel is 10 N. Calculate the acceleration of the squirrel if its mass is 2 kg.
		Show your working and state the formula that you use.
		formula used
		working
		[2]

(b)	Late	er in its fall, the squirrel reaches a steady speed (terminal velocity) of 3 m/s.	
	(i)	State the value of the air resistance now.	
		air resistance N	
		Explain your answer.	
			[2]
	(ii)	Explain why the value of the air resistance has changed.	
			[1]
(	(iii)	The surface area of the squirrel on which the air resistance acts is $0.4\mathrm{m}^2$ . Use your answer to <b>(b)(i)</b> and the formula	
		$pressure = \frac{force}{area}$	
		to calculate the pressure on the squirrel.	
		Show your working.	
			[2]

5 Fig. 5.1 shows a section through a human eye. The eye is focused on a distant object.

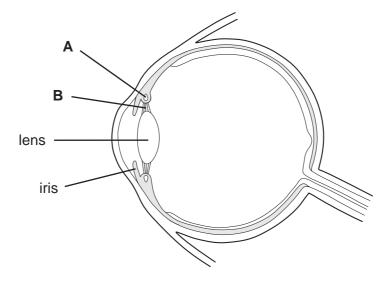

Fig. 5.1

- (a) When the eye focuses on a near object, the lens becomes thicker.
  - (i) Describe the changes that will take place in parts **A** and **B** when the eye focuses on a near object.

Α.	
В.	
	[2]

(ii) Explain why the lens needs to become thicker in order to focus on a near object. You may draw a diagram if it helps your answer.

		•••
(b)		e iris is the coloured part of the eye. It can become wider or narrower to regulate the ount of light that can reach the retina.
		e colour of the iris of a rabbit is determined by the rabbit's genes. A rabbit with the notype <b>Bb</b> or <b>BB</b> has brown eyes. A rabbit with the genotype <b>bb</b> has yellow eyes.
	(i)	Use a genetic diagram to explain how two rabbits with brown eyes may have young with yellow eyes.
		[3]
		[3] casionally, a mutation occurs in some of the cells of the iris, which may result in the becoming a different colour.
		casionally, a mutation occurs in some of the cells of the iris, which may result in the
	iris	casionally, a mutation occurs in some of the cells of the iris, which may result in the becoming a different colour.
	iris	casionally, a mutation occurs in some of the cells of the iris, which may result in the becoming a different colour.  Ionising radiation may cause mutation. Explain how it does this.
	iris	casionally, a mutation occurs in some of the cells of the iris, which may result in the becoming a different colour.  Ionising radiation may cause mutation. Explain how it does this.  [1]
	iris	casionally, a mutation occurs in some of the cells of the iris, which may result in the becoming a different colour.  Ionising radiation may cause mutation. Explain how it does this.
	iris	casionally, a mutation occurs in some of the cells of the iris, which may result in the becoming a different colour.  Ionising radiation may cause mutation. Explain how it does this.  [1]  Explain why this change in colour of the iris will not be passed on to the rabbit's
	iris	casionally, a mutation occurs in some of the cells of the iris, which may result in the becoming a different colour.  Ionising radiation may cause mutation. Explain how it does this.  [1]  Explain why this change in colour of the iris will not be passed on to the rabbit's offspring.
	iris	casionally, a mutation occurs in some of the cells of the iris, which may result in the becoming a different colour.  Ionising radiation may cause mutation. Explain how it does this.  [1]  Explain why this change in colour of the iris will not be passed on to the rabbit's offspring.

**6** Fig. 6.1 shows the apparatus a student used to investigate the effect of strong heating on sodium hydrogencarbonate, NaHCO<sub>3</sub>.

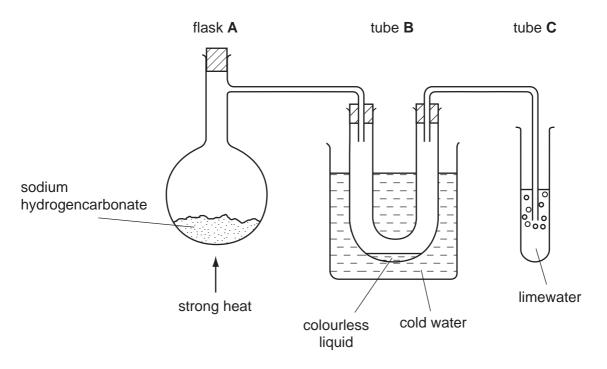

Fig. 6.1

Table 6.1 shows observations the student made before and after heating the sodium hydrogencarbonate for several minutes.

Table 6.1

	before heating	after heating
flask <b>A</b>	white solid	white solid
tube <b>B</b>	tube empty	colourless liquid has condensed
tube C	clear liquid	liquid has become cloudy

)	State two observations from Table 6.1 which show that a chemical reaction occurs when sodium hydrogencarbonate is heated.
	1.
	2.
	[2]

(b) An incomplete symbolic equation for the reaction in Fig. 6.1 is shown below.

	2NaHCO <sub>3</sub> → Na <sub>2</sub> CO <sub>3</sub> + CO <sub>2</sub> +
	Use the incomplete equation above to deduce the name of the colourless liquid which condenses in tube B. Explain your answer.
	[2]
(c)	Sodium carbonate is sometimes added to hard water in order to soften it. The symbolic equation below shows the reaction that occurs when sodium carbonate is added to a sample of hard water.  In this equation the symbols (aq) and (s) show whether the substance is an aqueous solution or a solid respectively.
	$Na_2CO_3(aq) + CaCl_2(aq) \longrightarrow 2NaCl(aq) + CaCO_3(s)$
	(i) Name the type of chemical reaction shown above.
	[1]
	(ii) Explain why this reaction softens the water.
	[2]
(d)	Sodium carbonate is mixed with silicon(IV) oxide and other oxides to make glass. The mixture has to be heated to a very high temperature in order to melt it and allow the glass to form.  Explain, in terms of their structures, why compounds like sodium carbonate and silicon(IV) oxide have such high melting points.
	[3]

7	(a)		ar has two headlight lamps at the front and two rear light lamps at the back. All four ps are connected in parallel with each other across a 12V battery.
		(i)	Draw a circuit diagram to show how the two headlight lamps are connected to the battery. Include a switch in your circuit to control the two headlight lamps.
			[3]
		(ii)	If one lamp fails, the other stays lit. Explain why this happens.
			[41]
			[1]
		(iii)	Each headlight lamp takes a current of 5 A and each rear light lamp takes a current of 1 A. What is the total current taken by these four lamps?
			Show your working
			[2]

**(b)** Fig. 7.1 shows a speaker for a car radio.

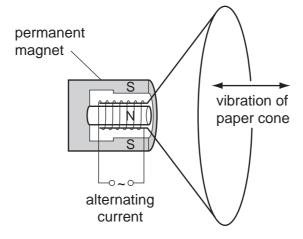

Fig. 7.1

		plain why the cone of the speaker vibrates when an alternating current passes bugh the coil.
		[3]
		[o]
(c)		e pressure of the air in car tyres must be correct to give a good grip on the road face.
	(i)	Explain in terms of particles why adding more air to a car tyre increases the pressure in the tyre.
		[2]
	(ii)	Tyres become warmer during long journeys. Explain in terms of particles why this will result in an increase in tyre pressure.
		[2]

**8** A gardener in a country with a cool climate grows peppers in a glasshouse. Fig. 8.1 shows how light intensity affects the rate of growth of the pepper plants.

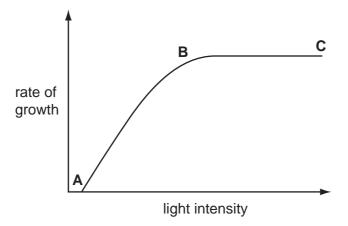

Fig. 8.1

		<b></b>	
(a)	Ехр	lain the reasons for the shape of the graph	
	betv	veen <b>A</b> and <b>B</b> ,	
	betv	ween <b>B</b> and <b>C</b> .	
	•••••		[3]
(b)		gardener thinks she might be able to increase the growth of her plants by burning such as methane in the glasshouse.	ng a
	(i)	Write a <b>word</b> equation for the complete combustion of methane.	
			[1]
	(ii)	State two reasons why burning methane in the glasshouse might increase growth of the pepper plants.	the
		1	
		2	[2]

(c)		other way of increasing the growth of the plants is to provide them with a fertilise staining nitrogen.	er
	(i)	Suggest <b>one</b> compound which can be found in a fertiliser and which provide nitrogen to the plants in a form that they can use.	es
		[	1]
	(ii)	Explain why extra nitrogen can increase the growth of plants.	
		[2	2]
	(iii)	Explain how the careless use of nitrogen-containing fertilisers near to streams are lakes can harm the organisms that live in them.	nd
			3]

**9** (a) Table 9.1 shows some information about two elements **X** and **Y**. Both elements are in the third period of the Periodic Table.

Complete the table by writing the words **high** or **low** in the empty boxes. Two of the boxes have already been completed.

Table 9.1

element	group number in Periodic Table	melting point	electrical conductivity	pH of element oxide in water
x	2	high		
Y	7	low		

[2]

**(b)** A compound from which the metal titanium can be extracted is ilmenite, TiFeO<sub>3</sub>. In order to obtain titanium, ilmenite is first processed to form titanium chloride. Titanium chloride is then reacted with magnesium. Symbolic equations for these two reactions are shown below.

$$2\text{TiFeO}_3 + 7\text{C}l_2 + 6\text{C} \longrightarrow 2\text{TiC}l_4 + 2\text{FeC}l_3 + 6\text{CO}$$

## reaction 2

$$TiCl_4 + 2Mg \longrightarrow 2MgCl_2 + Ti$$

(i) Name **one** element which has been oxidised in **reaction 1**. Explain your answer.

		[1]

(ii) Fig. 9.1 shows a diagram of a chlorine atom, showing only the outer electron shell.

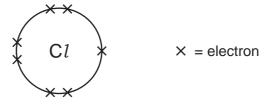

Fig. 9.1

Draw	а	diagram	to	show	how	the	outer	electrons	are	arranged	in	а	molecule	of
chlorin	ne.													

	[2]
(iii)	Describe how the arrangement of the electrons around the magnesium atoms changes during <b>reaction 2</b> .
	[2]
(c) Allo	bys containing large amounts of titanium are widely used to make replacement hip its.
fe	pelvis  replacement hip joint made of titanium alloy  mur (thigh bone)
	ggest why an alloy of titanium rather than pure titanium is more suitable for making lacement hip joints which have to carry a person's weight.
