Paper 2 Theory

May/June 2017

1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Section A

Answer **all** questions.

Write your answers in the spaces provided in the Question Paper.

Section B

Answer any **three** questions.

Write your answers in the spaces provided in the Question Paper.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of **20** printed pages.

Section A

Answer **all** the questions in this section in the spaces provided.

The total mark for this section is 45.

A1 Choose from the following oxides to answer the questions.

calcium oxide

carbon dioxide

copper(II) oxide

silicon dioxide

sodium oxide

sulfur dioxide

sulfur trioxide

zinc oxide

Each oxide can be used once, more than once or not at all.

Which oxide

(a) has a giant covalent structure,

..... [1]

(b) reacts with both acids and alkalis,

..... [1]

(c) reacts with water to form a strong acid,

..... [1]

(d) contains a cation with a charge of +1?

..... [1]

[Total: 4]

A2 (a) Atoms and ions contain three types of sub-atomic particle.

Complete the table about these sub-atomic particles.

sub-atomic particle	relative charge	relative mass
electron		
neutron		1
proton	+1	

[3]

(b) The table shows some information about six particles.

particle	number of protons in particle	number of neutrons in particle	number of electrons in particle
A	37	48	37
B	53	74	54
C	92	143	92
D	92	143	89
E	92	146	92
F	94	150	92

(i) What is the nucleon number for particle **A**?

..... [1]

(ii) Explain why particle **B** is a negative ion.

.....
..... [1]

(iii) Which two **atoms** are isotopes of the same element?

..... and

Explain your answer.

.....
..... [2]

[Total: 7]

A3 Acids are neutralised by alkalis.

- (a) Write the ionic equation for the reaction between an acid and an alkali.

..... [1]

- (b) Sodium sulfate is a soluble salt that can be prepared using a titration method.

- (i) Name a sodium compound and the acid that can be used to make sodium sulfate by this method.

..... [1]

- (ii) Describe how the titration method is used to prepare a colourless solution of sodium sulfate.

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....

[3]

- (iii) Describe how a sample of pure sodium sulfate crystals can be made from aqueous sodium sulfate.

.....
.....
.....
.....
.....
.....
.....

[2]

- (c) Aqueous sodium sulfate can be used to prepare barium sulfate.

In an experiment, 20.0 cm^3 of 0.550 mol/dm^3 of barium nitrate was added to excess aqueous sodium sulfate.

- (i) Calculate the maximum mass of barium sulfate that could be made.

[The relative formula mass of BaSO_4 is 233.]

maximum mass of barium sulfate = g [2]

- (ii) A mass of 1.92 g of dry barium sulfate was obtained. Calculate the percentage yield of barium sulfate.

percentage yield of barium sulfate = % [1]

[Total: 10]

A4 Calcium chloride, CaCl_2 , is an ionic compound.

- (a) State the electronic configuration for each of the ions in calcium chloride.

calcium ion

chloride ion

[2]

- (b) When **molten** calcium chloride is electrolysed, calcium and chlorine are formed.

Construct equations for the two electrode reactions.

reaction at the negative electrode

.....

reaction at the positive electrode

.....

[2]

- (c) Predict the products of the electrolysis of concentrated **aqueous** calcium chloride.

..... [1]

- (d) Explain, using ideas about structure and bonding, why calcium chloride has a high melting point.

.....

.....

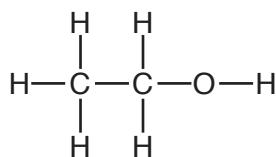

.....

[2]

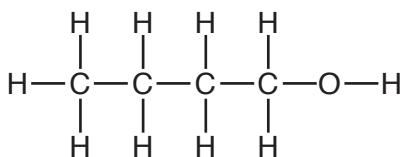

[Total: 7]

PLEASE TURN OVER.

A5 Ethanol and butanol are both alcohols.

ethanol

butanol

- (a) Describe the manufacture of ethanol from ethene.

.....
.....
.....

[2]

- (b) Ethanol is used as a fuel and as a constituent of alcoholic beverages.

- (i) State one **other** use of ethanol.

.....

[1]

- (ii) Construct an equation to show the **incomplete** combustion of ethanol.

.....

[2]

- (c) Ethanol can be oxidised to form ethanoic acid.

Name a reagent that can be used for this oxidation.

.....

[1]

- (d) Draw the structure of an alcohol that is an isomer of butanol.

Show all of the atoms and all of the bonds.

[1]

- (e) Butanol can be converted into an alkene by loss of a molecule of water.

Draw the structure of the alkene formed.

Show all of the atoms and all of the bonds.

[1]

- (f) Butene can be polymerised to give poly(butene).

- (i) What type of polymerisation occurs?

..... [1]

- (ii) Poly(butene) is non-biodegradable.

What does the term *non-biodegradable* mean?

.....
.....
..... [1]

[Total: 10]

A6 Photosynthesis is a reaction that occurs in the leaves of green plants.

Carbon dioxide and water are converted into glucose and oxygen.

The reaction is endothermic and is catalysed by enzymes.

(a) Draw an energy profile diagram for photosynthesis using the axes shown.

Label

- the axes,
- the enthalpy change,
- the reactants and products.

[3]

(b) (i) What is an enzyme?

.....
.....

[1]

(ii) State the effect of enzymes on reactions.

.....
.....

[1]

(c) Explain why the rate of photosynthesis increases as the temperature increases.

.....
.....
.....
.....

[2]

[Total: 7]

Section B

Answer **three** questions from this section in the spaces provided.

The total mark for this section is 30.

- B7** Copper reacts with concentrated nitric acid.

- (a) Suggest what you would observe when copper reacts with concentrated nitric acid.

..... [1]

- (b) (i) Suggest the name of the salt of formula $\text{Cu(NO}_3)_2$.

..... [1]

- (ii) Copper is oxidised when it reacts with concentrated nitric acid.

Use the equation to explain that copper has been oxidised.

..... [1]

- (c) An excess of copper is added to 25.0 cm^3 of $16.0\text{ mol/dm}^3\text{ HNO}_3$.

Use this information, together with the equation above, to calculate the volume of NO_2 formed.

The gas volume is measured at room temperature and pressure.

volume of NO_2 = [3]

- (d) When heated, $\text{Cu}(\text{NO}_3)_2$ decomposes to form CuO , NO_2 and O_2 .

Construct the equation for this reaction.

..... [1]

- (e) To a sample of $\text{Cu}(\text{NO}_3)_2(\text{aq})$, a student adds aqueous ammonia drop by drop until it is in excess.

- (i) Describe what is observed.

.....
.....
.....
..... [2]

- (ii) The student repeats the experiment but adds aqueous sodium hydroxide instead of aqueous ammonia.

Describe what is observed.

.....
..... [1]

[Total: 10]

- B8** Iodine reacts with chlorine to form iodine(I) chloride, ICl .

Iodine(I) chloride reacts in a similar way to both iodine and chlorine.

- (a) Sodium reacts with iodine(I) chloride.

Construct the equation for the reaction between sodium and iodine(I) chloride.

..... [1]

- (b) Iodine(I) chloride reacts with ethene.

Draw the structure of the product of this reaction.

Show all of the atoms and all of the bonds.

[1]

- (c) Iodine(I) chloride reacts with ethane in the presence of ultraviolet light.

Deduce the type of reaction that takes place and construct an equation for this reaction.

type of reaction

equation

[2]

- (d) Draw a ‘dot-and-cross’ diagram to show a molecule of iodine(I) chloride.

Only show the outer shell electrons.

[1]

- (e) Iodine(I) chloride reacts with chlorine to form iodine(III) chloride.

This reaction is investigated at 200 °C in a sealed container.

A dynamic equilibrium mixture is established.

$\text{ICl}(g)$ is a dark brown gas.

$\text{ICl}_3(g)$ is a yellow gas.

- (i) What is meant by the term *dynamic equilibrium*?

Refer to both rate of reaction and concentration in your answer.

.....
.....
.....
.....
.....
.....

[3]

- (ii) The pressure of the equilibrium mixture is increased.

The temperature is kept at 200 °C.

Predict and explain what will happen to the colour of the equilibrium mixture.

.....
.....
.....
.....
.....
.....

[2]

[Total: 10]

B9 Neon, argon, krypton and xenon are four of the noble gases. They are monatomic elements.

- (a) State a use of argon.

..... [1]

- (b) What is meant by the term *monatomic*?

..... [1]

- (c) Explain why the noble gases are very unreactive.

..... [1]

- (d) Chemists have discovered that some noble gases can form compounds.

A 1.000g sample of one of these compounds contains 0.549g of xenon, 0.134g of oxygen and 0.317g of fluorine.

- (i) Calculate the empirical formula of this compound.

empirical formula [2]

- (ii) What extra information is needed to deduce the molecular formula of this compound?

..... [1]

- (e) Describe and explain how fractional distillation can be used to separate a mixture of neon, argon, krypton and xenon.

.....
.....
.....
..... [3]

- (f) A mixture of neon, argon, krypton and xenon can also be separated by diffusion.

Explain why.

..... [1]

[Total: 10]

B10 The table shows some information about the homologous series of unbranched carboxylic acids.

name	structure	boiling point/°C
methanoic acid	HCO_2H	101
ethanoic acid	$\text{CH}_3\text{CO}_2\text{H}$	118
propanoic acid	$\text{CH}_3\text{CH}_2\text{CO}_2\text{H}$	141
butanoic acid	$\text{CH}_3\text{CH}_2\text{CH}_2\text{CO}_2\text{H}$	164
pentanoic acid	$\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_2\text{CO}_2\text{H}$	186

(a) A homologous series has a general formula.

(i) Deduce the general formula for the homologous series of unbranched carboxylic acids.

..... [1]

(ii) Describe two **other** properties of a homologous series.

1.

.....

2.

.....

[2]

(b) An aqueous solution of propanoic acid is a weak acid.

(i) What is the meaning of the term *weak acid*?

..... [1]

(ii) Aqueous propanoic acid reacts with magnesium carbonate.

Construct the equation for this reaction.

..... [1]

- (c) Butanoic acid reacts with ethanol to make an ester.

Name and draw the structure of this ester. Show all of the atoms and all of the bonds within the ester linkage.

name

structure

[2]

- (d) Ethanoic acid is a liquid at room temperature and has a boiling point of 118 °C.

Describe the changes in both the arrangement and movement of the molecules when ethanoic acid is heated from room temperature to 120 °C.

.....
.....
.....
.....
.....
.....
.....

[3]
