## A-level

COMPUTER SCIENCE (7517/1A/1B/1C/1D/1E)

## Paper 1

Specimen 2015
am/pm
Time allowed: 2 hours 30 minutes

## Materials

- For this paper you must have access to:
- a computer
- a printer
- appropriate software.
- An electronic version of the Skeleton Program and Data File.
- A hard copy of the Preliminary Material.

## Instructions

- Type the information required on the front of your Electronic Answer Document.
- Enter your answers into the Electronic Answer Document.
- Answer all questions.
- Before the start of the examination make sure your centre number, candidate name and candidate number are shown clearly in the footer of every page of your Electronic Answer Document (not the front cover).
- Tie together all your printed Electronic Answer Document pages and hand them to the invigilator.

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 100 .
- No extra time is allowed for printing and collating.
- The question paper is divided into four sections.
- You are not allowed to use a calculator.

## Advice

- You are advised to spend time on each section as follows:

Section A - 55 minutes
Section B-20 minutes
Section C-15 minutes
Section D-60 minutes.

- Save your work at regular intervals.

## Section A

You are advised to spend no more than 55 minutes on this section.
Enter your answers to Section A in your Electronic Answer Document.
You must save this document at regular intervals.

| 0 | 1 | The famous detective John Stout was called in to solve a perplexing murder |
| :--- | :--- | :--- | mystery. He determined the following facts.

(a) Nathan, the murdered man, was killed by a blow on the head.
(b) Either Suzanne or Martin was in the dining room at the time of the murder.
(c) If Peter was in the kitchen at the time of the murder, then Ian killed Nathan using poison.
(d) If Suzanne was in the dining room at the time of the murder, then Steve killed Nathan.
(e) If Peter was not in the kitchen at the time of the murder, then Martin was not in the dining room when the murder was committed.
(f) If Martin was in the dining room at the time the murder was committed, then Paul killed Nathan.
(g) If Kevin was in the hall at the time of the murder, then Suzanne killed Nathan by a blow to the neck with a saucepan.

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{1}$ Who murdered Nathan? |
| :--- | :--- | :--- |

A Paul
B Steve
C Suzanne
D lan
E It is not possible for John Stout to solve the crime.
Write the letter corresponding to the correct answer in the box provided in your Electronic Answer Document.

Use the space below for rough working, then write your answer in your Electronic Answer Document.

A finite state machine (FSM) can be used to define a language: a string is allowed in a language if it is accepted by the FSM that represents the rules of the language.
Figure 1 shows the state transition diagram for an FSM.
Figure 1

An FSM can be represented as a state transition diagram or as a state transition table. Table 1 is an incomplete state transition table for Figure 1.

| 0 | 2 |
| :--- | :--- |

Complete Table 1 and copy the table into the Electronic Answer Document.

Table 1

| Original state | Input | New state |
| :---: | :---: | :---: |
| S3 |  |  |
| S3 |  |  |

Any language that can be defined using an FSM can also be defined using a regular expression.

The FSM in Figure 1 defines the language that allows all strings containing at least, either two consecutive 1 s or two consecutive 0 s.

The strings 0110,00 and 01011 are all accepted by the FSM and so are valid strings in the language.

The strings 1010 and 01 are not accepted by the FSM and so are not valid strings in the language.

| $\mathbf{0}$ | $\mathbf{2}$. | $\mathbf{2}$ Write a regular expression that is equivalent to the FSM shown in Figure 1. |
| :--- | :--- | :--- |

## Question 2 continues on the next page

Backus-Naur Form (BNF) can be used to define the rules of a language.
Figure 2 shows an attempt to write a set of BNF production rules to define a language of full names.

## Figure 2

Note: underscores (_) have been used to denote spaces.
Note: rule numbers have been included but are not part of the BNF rules.

```
Rule
number
1 <fullname> ::= <title>_<name>_<endtitle> |
    <name> |
    <title>_<name> |
    <name>_<endtitle>
2 <title> ::= MRS | MS | MISS | MR | DR | SIR
3 <endtitle> ::= ESQUIRE | OBE | CBE
4 <name> ::= <word> |
    <name>_<word>
5 <word> ::= <char><word>
6<<char> ::= A | B | C | D | E | F | G | H | I |
```

BNF can be used to define languages that are not possible to define using regular expressions. The language defined in Figure 2 could not have been defined using regular expressions.

Table 2

| Rule number <br> (given in Figure 2) | Could be defined using a regular expression |
| :--- | :--- |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |
| 6 |  |

Copy your answer in Table 2 into the Electronic Answer Document.

There is an error in rule 5 in Figure $\mathbf{2}$ which means that no names are defined by the language.

| $\mathbf{0}$ | $\mathbf{2}$. 4 Explain what is wrong with the production rule and rewrite the production rule so that |
| :--- | :--- | :--- | the language does define some names - the names 'BEN D JONES', 'JO GOLOMBEK' and 'ALULIM' should all be defined.

## Turn over for the next question

| 0 | 3 |
| :--- | :--- | The Cat transportation company (CTC) is a business that specialises in preparing cats for cat shows.

They need to take five cats to the AQA cat show. They will transport the cats in their van. CTC owns only one van.

They cannot put all the cats in their van at the same time because some of the cats get stressed when in the company of some of the other cats. The cats would not therefore arrive in top condition for the cat show if they were all in the van at the same time.

The graph in Figure 3 shows the relationships between the five cats (labelled 1 to 5 ). If there is an edge between two cats in the graph then they cannot travel in the van together at the same time.

Figure 3

| $\mathbf{0}$ | $\mathbf{3} .2$ | $\mathbf{2}$ Represent the graph shown in Figure $\mathbf{3}$ as an adjacency list by completing Table $\mathbf{3}$. |
| :--- | :--- | :--- |

Complete Table 3 and copy the table into the Electronic Answer Document.
[2 marks]

| :--- | :--- |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |

Table 4 shows how the graph in Figure 3 can be represented as an adjacency matrix.

## Table 4

| Vertex (in Figure 3) | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{1}$ | 0 | 1 | 1 | 0 | 0 |
| $\mathbf{2}$ | 1 | 0 | 1 | 1 | 0 |
| $\mathbf{3}$ | 1 | 1 | 0 | 0 | 1 |
| $\mathbf{4}$ | 0 | 1 | 0 | 0 | 0 |
| $\mathbf{5}$ | 0 | 0 | 1 | 0 | 0 |

| $\mathbf{0}$ | $\mathbf{3}$. | $\mathbf{3}$ Explain the circumstances in which it is more appropriate to represent a graph using |
| :--- | :--- | :--- | an adjacency list instead of an adjacency matrix.

## Question 3 continues on the next page

Figure 4 shows an algorithm, written in pseudo-code, that CTC use.

## Figure 4

```
NoofCats \leftarrow 5
Cat[1] \leftarrow 1
FOR A < 2 TO NoOfCats
    B}\leqslant
    C}\leqslant
    WHILE B < A DO
        IF M[A, B] = 1
                THEN
                IF Cat[B] = C
                                    THEN
                                    B}\leftarrow
                                    C}\leftarrowC+
                                    ELSE B < B + 1
                ENDIF
                ELSE B & B + 1
            ENDIF
    ENDWHILE
    Cat[A]}\leftarrow
ENDFOR
```

The two-dimensional array, M , is used to store the adjacency matrix shown in Table 4.

| 0 | 3 |
| :--- | :--- | :--- |

[6 marks]
Copy your answer in Table 5 into the Electronic Answer Document.
Table 5

| Cat |  |  |  |  |  |  |  |  |

There are no questions printed on this page

Turn over for Section B

## Section B

You are advised to spend no more than $\mathbf{2 0}$ minutes on this section.
Enter your answers to Section B in your Electronic Answer Document.
You must save this document at regular intervals.
The question in this section asks you to write program code starting from a new program/project/file.

- Save your program/project/file in its own folder/directory.
- Save your program/project/file at regular intervals.

| $\mathbf{0}$ | $\mathbf{6} \quad$ Create a folder/directory called Question6 for your new program. |
| :--- | :--- | :--- |

One method for converting a decimal number into binary is to repeatedly divide by 2 using integer division. After each division is completed, the remainder is output and the integer result of the division is used as the input to the next iteration of the division process. The process repeats until the result of the division is 0 .

Outputting the remainders in the sequence that they are calculated produces the binary digits of the equivalent binary number, but in reverse order.

For example, the decimal number 210 could be converted into binary as shown in Figure 7.

Figure 7

| $210 \div 2$ | $=105$ |  | remainder 0 |
| ---: | :--- | ---: | :--- |
| $105 \div 2$ | $=52$ |  | remainder 1 |
| $52 \div 2$ | $=26$ |  | remainder 0 |
| $26 \div 2$ | $=13$ |  | remainder 0 |
| $13 \div 2$ | $=6$ |  | remainder 1 |
| $6 \div 2$ | $=3$ |  | remainder 0 |
| $3 \div 2$ | $=1$ | remainder 1 |  |
| $1 \div 2$ | $=0$ |  | remainder 1 |

The sequence $0,1,0,0,1,0,1,1$ which would be output by this process is the reverse of the binary equivalent of 210 which is 11010010 .

## What you need to do

## Task 1

Write a program that will perform the conversion process described above. The program should display a suitable prompt asking the user to input a decimal number to convert and then output the bits of the binary equivalent of the decimal number in reverse order.

## Task 2

Improve the program so that the bits are output in the correct order, e.g. for 210 the output would be 11010010.

Task 3
Test the program works by entering the value 210 .
Save the program in your new Question6 folder/directory.

## Evidence that you need to provide

Include the following in your Electronic answer document.

| $\mathbf{0}$ | $\mathbf{6} .1$ | $\mathbf{1}$ Your PROGRAM SOURCE CODE after you have completed both Task 1 and |
| :--- | :--- | :--- | :--- | Task 2.

If you complete Task 1 but do not attempt Task 2 then a maximum of 9 marks will be awarded.

| $\mathbf{0}$ | $\mathbf{6} .2$ | $\mathbf{2}$ SCREEN $\operatorname{CAPTURE}(\mathrm{S})$ for the test showing the output of the program when 210 is |
| :--- | :--- | :--- | :--- | :--- | entered.

The marks for this test will be awarded whether the binary digits are output in reverse order or in the correct order.
[2 marks]

## END OF SECTION B

## Turn over for Section C

## Section C

You are advised to spend no more than 15 minutes on this section.
Type your answers to Section C in your Electronic Answer Document.
You must save this document at regular intervals.
These questions refer to the Preliminary Material and require you to load the Skeleton Program, but do not require any additional programming.

Refer either to the Preliminary Material issued with this question paper or your electronic copy.

| Describe the changes that would need to be made to the Game class to add a third |  |  |  | trap to the cavern. The third trap should have exactly the same functionality as the other two traps. You do not need to describe the changes that would need to be made to the SetUpGame subroutine.

[2 marks]

## END OF SECTION C

## Turn over for Section D

## Section D

You are advised to spend no more than $\mathbf{6 0}$ minutes on this section.
Type your answers to Section D in your Electronic Answer Document.
You must save this document at regular intervals.
These questions require you to load the Skeleton Program and to make programming changes to it.

0 O This question refers to the subroutines CheckValidMove and Play in the Game class.

The Skeleton Program currently does not make all the checks needed to ensure that the move entered by a player is an allowed move. It should not be possible to make a move that takes a player outside the $7 \times 5$ cavern grid.

The Skeleton Program needs to be adapted so that it prevents a player from moving west if they are at the western end of the cavern.

The subroutine CheckValidMove needs to be adapted so that it returns a value of FALSE if a player attempts to move west when they are at the western end of the cavern.

The subroutine Play needs to be adapted so that it displays an error message to the user if an illegal move is entered. The message should state "That is not a valid move, please try again".

## Evidence that you need to provide

Include the following in your Electronic Answer Document.

| $\mathbf{0}$ | $\mathbf{8}$ | $\mathbf{1}$ | $\mathbf{1}$ |
| :--- | :--- | :--- | :--- |

CheckValidMove.

| $\mathbf{0}$ | $\mathbf{8}$. | $\mathbf{2}$ Your amended PROGRAM SOURCE CODE for the subroutine Play. |
| :--- | :--- | :--- | :--- |

[2 marks]

| 0 | $\mathbf{8}$ | $\mathbf{3}$ SCREEN CAPTURE(S) for a test run showing a player trying to move west when |
| :--- | :--- | :--- | :--- | they are at the western end of the cave.

This question will extend the functionality of the game.
The game is to be altered so that there is a new type of enemy: a sleepy enemy. A sleepy enemy is exactly the same as a normal enemy, except that after making four moves it falls asleep again.

## Task 1

Create a new class called SleepyEnemy that inherits from the Enemy class.

## Task 2

Create a new integer attribute in the SleepyEnemy class called MovesTillSleep.

## Task 3

Create a new public subroutine in the SleepyEnemy class called
ChangeSleepStatus. This subroutine should override the
ChangeSleepStatus subroutine from the Enemy class. The value of MovesTillSleep should be set to 4 in this subroutine.

## Task 4

Create a new public subroutine in the SleepyEnemy class called MakeMove. This subroutine should override the MakeMove subroutine from the Enemy class. When called this subroutine should reduce the value of MovesTillSleep by 1 and then send the monster to sleep if MovesTillSleep has become equal to 0 .

Task 5
Modify the Game class so that the Monster object is of type SleepyEnemy (instead of Enemy).

## Task 6

Check that the changes you have made work by conducting the following test:

- play the training game
- move east
- move east
- move south.

Evidence that you need to provide
Include the following in your Electronic Answer Document.

| $\mathbf{0}$ | $\mathbf{9}$ | $\mathbf{1}$ | Your PROGRAM SOURCE CODE for the new SleepyEnemy class. |
| :--- | :--- | :--- | :--- |

| $\mathbf{0}$ | $\mathbf{9} .2$ | $\mathbf{2}$ SCREEN CAPTURE(S) showing the requested test. |
| :--- | :--- | :--- |

[2 marks]

This question refers to the Game and Character classes and will extend the functionality of the game.

The game should be altered so that once per game the player can shoot an arrow instead of making a move in the cavern. The arrow travels in a straight line, in a direction of the player's choice, from the cell the player is in to the edge of the cavern. If the arrow hits the monster then the player wins the game and a message saying that they have shot the monster should be displayed.

For this question you are only required to extend the program so that it checks if the monster is hit by the arrow when the user chooses to shoot an arrow northwards. However, the user should be able to select any of the four possible directions.

In Figure 9, the two shaded cells show the cells which, if the monster is in one of them, would result in the player winning the game, as long as the player is in the cell five to the east and three to the south and chooses to shoot an arrow northwards.

Figure 9

## Task 1

Modify the DisplayMoveOptions subroutine in the Game class so that the option to enter A to shoot an arrow is added to the menu.

## Task 2

Create a new Boolean attribute called HasArrow in the Character class.
The value of HasArrow should be set to True when a new object of class Character is instantiated.

## Task 3

Create a new public subroutine called GetHasArrow in the Character class that returns the value of the HasArrow attribute to the calling routine.

Task 4
Modify the CheckValidMove subroutine in the Game class so that:

- it is a valid move if $A$ is selected and the player does have an arrow
- it is not a valid move if $A$ is selected and the player does not have an arrow.

## Task 5

Create a new public subroutine called GetArrowDirection in the Character class.

This subroutine should return a character to the calling routine.
The user should be asked in which direction they would like to shoot an arrow ( N , $\mathrm{S}, \mathrm{E}$ or W ) and the value entered by the user should be returned to the calling routine.

If an invalid direction is entered then the user should be repeatedly asked to enter a new direction, until a valid direction is entered.

The value of HasArrow should then be changed to FALSE.

## Task 6

Modify the Play subroutine in the Game class so that if the move chosen by the user is not M it then checks if the move chosen is A .

If the move chosen was A , then there should be a call to the player's GetArrowDirection subroutine. If the user chooses a direction of N then the program should check to see if the monster is in one of the squares directly north of the player's current position. If it is then a message saying "You have shot the monster and it cannot stop you finding the flask" should be displayed. The value of FlaskFound should then be set to TRUE.

After the arrow has been shot, if the monster is still alive and awake, it is now the monster's turn to move, the player should remain in the same cell as they were in before the arrow was shot.

There is no need to write any code that checks if the monster has been shot when the player chooses to shoot either to the east, to the west or to the south.

## Task 7: test 1

Test that the changes you have made work by conducting the following test:

- play the training game
- shoot an arrow
- choose a direction of N for the arrow.

## Task 8: test 2

Test that the changes you have made work by conducting the following test:

- play the training game
- move east
- shoot an arrow
- choose a direction of N for the arrow
- shoot an arrow.

Question 10 continues on the next page

Evidence that you need to provide
Include the following in your Electronic Answer Document.

| $\mathbf{1}$ | $\mathbf{0}$ | $\mathbf{1}$ | Your amended PROGRAM SOURCE CODE for the subroutine |
| :--- | :--- | :--- | :--- | DisplayMoveOptions.

| $\mathbf{1}$ | $\mathbf{0} .2$ | $\mathbf{2}$ Your amended PROGRAM SOURCE CODE for the subroutine |
| :--- | :--- | :--- | :--- | CheckValidMove.

| $\mathbf{1}$ | $\mathbf{0} \cdot \mathbf{3}$ Your amended PROGRAM SOURCE CODE for the class Character. |
| :--- | :--- | :--- | :--- |

| 1 | $\mathbf{0} .4$ | $\mathbf{4}$ Your amended PROGRAM SOURCE CODE for the subroutine Play. |
| :--- | :--- | :--- | :--- |

| 1 | 0 | 5 |
| :--- | :--- | :--- |

| $\mathbf{1}$ | $\mathbf{0} \cdot \mathbf{6}$ SCREEN CAPTURE(S) showing the results of Test 2. |
