7517/2-Paper 2 Mark scheme

June 2018

Version/Stage: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

AQA retains the copyright on all its publications. However, registered schools/colleges for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

Level of response marking instructions

Level of response mark schemes are broken down into levels, each of which has a descriptor. The descriptor for the level shows the average performance for the level. There are marks in each level.

Before you apply the mark scheme to a student's answer read through the answer and annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme.

Step 1 Determine a level

Start at the lowest level of the mark scheme and use it as a ladder to see whether the answer meets the descriptor for that level. The descriptor for the level indicates the different qualities that might be seen in the student's answer for that level. If it meets the lowest level then go to the next one and decide if it meets this level, and so on, until you have a match between the level descriptor and the answer. With practice and familiarity you will find that for better answers you will be able to quickly skip through the lower levels of the mark scheme.

When assigning a level you should look at the overall quality of the answer and not look to pick holes in small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level and then use the variability of the response to help decide the mark within the level, ie if the response is predominantly level 3 with a small amount of level 4 material it would be placed in level 3 but be awarded a mark near the top of the level because of the level 4 content.

Step 2 Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will help. There will be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example.

You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the Indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

A-level Computer Science

Paper 2

June 2018

To Examiners:

• When to award '0' (zero) when inputting marks on CMI+ A mark of 0 should be awarded where a candidate has attempted a question but failed to write anything credit worthy.

Insert a hyphen when a candidate has not attempted a question, so that eventually the Principal Examiner will be able to distinguish between the two (not attempted / nothing credit worthy) in any statistics.

• This mark scheme contains the correct responses which we believe that candidates are most likely to give. Other valid responses are possible to some questions and should be credited. Examiners should refer responses that are not covered by the mark scheme, but which they deem creditworthy, to a Team Leader.

The following annotation is used in the mark scheme:

- ; means a single mark
- II means an alternative response
- means an alternative word or sub-phrase
- A means an acceptable creditworthy answer
- R means reject answer as not creditworthy
- NE means not enough
- I means ignore
- DPT in some questions a specific error made by a candidate, if repeated, could result in the loss of more than one mark. The DPT label indicates that this mistake should only result in a candidate losing one mark on the first occasion that the error is made. Provided that the answer remains understandable, subsequent marks should be awarded as if the error was not being repeated.

Examiners are required to assign each of the candidate's responses to the most appropriate level according to **its overall quality** and then allocate a single mark within the level. When deciding upon a mark in a level examiners should bear in mind the relative weightings of the assessment objectives.

eg

In the following questions, the marks available are as follows:

Question 4 (max 12 marks) AO1 (understanding) – 12 marks

Question 6 (max 6 marks)

AO1 (knowledge) – 2 marks AO1 (understanding) – 4 marks

Q		Marks	
01	1	Mark is AO2 (apply); 30A; R. if more than one lozenge shaded.	1
01	2	All marks AO2 (apply)	2
01	3	All marks AO2 (apply) 2 marks for working: Correct (unsigned) representation of 608 in binary: 1001100000; A. leading 0s Correct representation of -608 in two's complement binary:10110100000; A. leading 1s Showing the correct value of the exponent in decimal (10) or binary (1010) // showing the binary point being shifted 10 places left; Max 2 1 mark for correct mantissa and exponent together: 1 • 0 1 1 0 1 0 Mantissa 0 1 0 1 0 Exponent If answer is correct and some working has been shown, award three marks, even if working would not have gained credit on its own. Working marks can be awarded for work seen in the final answer eg correct exponent.	3

02	1	2 marks for AO1 (knowledge) and 1 mark for AO1 (understanding)	3
		2 marks AO1 (knowledge):	-
		Image is represented as / composed of objects;	
		Properties (of objects) are stored //objects have properties;	
		A. "shapes" or "instructions" for "objects" (this time only)	
		NE. "formulae" for objects	
		A. "attributes" for "properties"	
		1 mark AO1 (understanding):	
		A property of the black rectangle is given; eg	
		• fill colour	
		outline/edge colour	
		 x coordinate of a specific point eg top right-hand corner 	
		 y coordinate of a specific point eg top right-hand corner 	
		 outline/edge width 	
		 width 	
		 height A if a property is given without it being directly related to the block rootengle. 	
		 A. if a property is given without it being directly related to the black rectangle. A. coordinates of a specific point eg top right-hand corner for one mark only if x and y 	
		not referenced	
		R. properties that are too vague eg position, colour, coordinates (without further	
		explanation), points (without reference to coordinates)	
		Marks should be awarded if student has asserted that rectangle drawn as a wide	
		line.	
02	2	All marks AO2 (apply)	
02	-		2
		50 x 50 x 2 / 8 = 625 (bytes)	
		2 marks for the correct answer with some working shown	
		OR	
		1 mark for one of:	
		 multiplying 50 by 50 in the working // 2500 in the working 	
		 multiplying by 2 in the working 	
		 giving the correct solution of 625 (bytes) with no working shown 	
02	3	All marks AO1 (knowledge)	
			2
		A run is a sequence/series of pixels of the same colour // the number of consecutive	
		pixels of the same colour would need to be counted;	
		(Pairs of values would be stored), which would consist of a run length and the colour of	
		the pixels in the run;	
		Example of how the specific row of pixels would be compressed eg 7 Yellow, 4 Blue, 9	
		Yellow; A. assignment of numeric values to colours	
		A. "row" for "run" as BOD	
		Max 2	

T							
02	4	All marks AO1 (understanding)	2				
		Runs will be of shorter length // the image (in the second figure) contains a lot more					
		different colours; A. colour depth is higher in the second image					
		(For short runs) the additional run length data may (largely) cancel out (or even outweigh) the reduction in storage of pixel colour data;					
		outweigh) the reduction in storage of pixer colour data,					
		A. responses given in reverse ie why first figure was compressed more effectively					
03	1	All marks AO2 (apply)					
		Inputs Outputs					
		A B C D E F G H 0 0 0 0 0 0 0 0					
		1 mark: Column D correct or column E or column F correct					
		1 mark: Column G correct					
		1 mark: Column H correct					
		Max 2 if any incorrect values in table					
03	2	All marks AO2 (apply)					
		B·C+A·(B⊕C)	3				
		B-C+A-(BUC)					
		1 mark: B·C or B \oplus C somewhere in expression					
		1 mark: A is ANDed with $B\oplus C$					
		1 mark: Fully correct expression					
		A. award second mark even if brackets around $B\oplus C$ are missing					
		A. use of AND, OR, XOR instead of symbols					
		A. $(\overline{B} \cdot C) + (B \cdot \overline{C})$ for $(B \oplus C)$					
		If a student has written an expression but then tried to simplify it and made an					
		error then mark the original expression that the student has written down and					
		ignore the simplification.					
03	3	Mark is for $AO2$ (analyse)					
US	3	Mark is for AO2 (analyse)	1				
. !							
1		adds together its inputs // it is a full adder circuit;					
		N.E. half-adder, adder					

Level	Description	Mark Rang
4	A line of reasoning has been followed to produce a coherent, relevant, substantiated and logically structured response. The response covers all three areas indicated in the guidance below and in at least two of these areas there is sufficient detail to show that the student has a good level of understanding. To reach the top of this mark range, a good level of understanding must be shown of all three areas.	10-12
3	A line of reasoning has been followed to produce a coherent, relevant, substantiated and logically structured response which shows a good level of understanding of at least two areas indicated in the guidance below.	7-9
2	A limited attempt has been made to follow a line of reasoning and the response has a mostly logical structure. At least four points have been made. Either a good level of understanding of one area from the guidance has been shown or a limited understanding of two areas.	4-6
1	A few relevant points have been made but there is no evidence that a line of reasoning has been followed. The points may only relate to one or two of the areas from the guidance or may be made in a superficial way with little substantiation.	1-3
	nce – Indicative Response	what

Use RAM // main memory // primary memory with a faster access time Replace HDDs with SSDs // Replace HDDS with HDDs that can read data at a faster rate Defragment the HDD Replace the motherboard with one which has buses which run at a faster clock speed Replace the motherboard with one which has more lines in the data bus Use the Harvard architecture Distribute the processing across multiple servers 2. Network Replace the network cable with cable that has a higher bandwidth // replace copper cable with fibre-optic cable A. Ethernet cable for fibre-optic NE. higher bandwidth network Replace any wireless/WiFi connections with wired ones Replace the network cards with ones that can transmit data at a higher bitrate Consider the overall network design eg how the network is divided into subnets A. split the network into subnets Use a star topology (instead of a bus) Consider using a more efficient protocol for the data across the network Add additional wireless access points 3. Database and Software Use a more efficient technique for controlling concurrent access to the database // replace record/table locks with serialisation/timestamp ordering/commitment ordering Replace the database software with software that uses more efficient algorithms for tasks A. examples eq replace linear search with binary search Use the index feature of the database to speed up searching on fields that are commonly used for this purpose Rewrite the database software in a language that is suitable for concurrent execution // use a functional programming language for the database software Ensure the software is compiled rather than executed by an interpreter // rewrite the software in assembly language/machine code Review the conceptual model of the database to see if it contains any inefficiencies such as data redundancy that could be eliminated A. normalise the database design Consider if it would be appropriate to sacrifice normalisation of the conceptual model to improve performance Use a non-relational database system A. examples eq NoSQL Distribute the data across multiple servers Try to reduce the amount of other (unrelated) software that might be running on the database server at the same time Try to reduce the number of database accesses that need to be made simultaneously // run some tasks at guiet times/overnight Purge / archive data that is no longer necessary/in use

05	1	Mark is for AO1 (understanding)			
			1		
		1 mark: Correct binary pattern (below):			
		1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1			
05	2	Mark is for AO2 (apply)	4		
		30 // (2 ⁵)-2;	1		
		A. 32, 2^5 , 31, (2^5) -1 (this time only)			
05	3	1 mark for AO1 (understanding) and 3 marks for AO1 (knowledge)			
		Purpose (1 mark – AO1 (knowledge)): To automate the configuration of hosts connecting to a (TCP/IP) network // to allocate			
		IP addresses/subnet mask/default gateway to hosts;			
		A. "computer" or suitable alternative term for "host"			
		Why used (1 mark – AO1 (understanding)):			
		Reduces the need for expert knowledge when configuring a host // reduces the time required to configure hosts // facilitates efficient use of a limited pool of IP addresses //			
		avoids errors with a relevant example such as duplicating IP addresses or programming			
		incorrect subnet mask; A. enables reuse of IP addresses			
		NE. "avoiding errors" without an example			
		Contents of communication (Max 2 marks – AO1 (knowledge)):			
		1. Host sends request to discover a (DHCP) server; A. host sends request for			
		configuration 2. (DHCP) server(s) offer configuration to host; NE. server gives IP address to host			
		3. Host accepts offer of configuration from (a DHCP) server (by echoing the accepted			
		configuration back to the server); 4. (DHCP) server confirms that configuration has been allocated to host;			
		A. "IP Address" for "configuration" but N.E. "subnet mask", "default gateway" for this			
		mark point Award one mark for any one correct point OR two marks for any two correct			
		points, made in the correct order.			
05	4	All marks AO1 (understanding)			
	.		2		
		Traffic arriving on the HTTP(S) port // the port used for web services // port 80/8080/443 (from outside the network) // HTTP(S) traffic (from outside the network);			
		Must be forwarded (by the External Router) to the IP address of the Web Server // IP address 192.168.16.12;			

Level	Description	Mark Range
3	A detailed, coherent, description that covers both the reading mechanism and how data is represented, demonstrating a very good level of understanding.	5-6
2	An adequate description, including at least three points from the list below. The description may cover one or both of the reading mechanism and how data is represented. The description is logically organised so that it makes sense when read as a whole and therefore demonstrates a reasonable understanding of the principles of operation of an optical disk drive.	3-4
1	A small number of relevant points have been recalled (in this case award one mark per point, up to a maximum of two from lists below). The structure of the response, or lack of it, means that only a very limited understanding of the principles of operation is demonstrated.	1-2
) • 4 • [4	ight is focussed on spot on track Some) light is reflected back from disk Amount of light reflected back is measured // light sensor detects re Disc spins at constant <u>linear</u> velocity // zoned constant <u>linear</u> veloci angular) velocity A. variable speed R. constant speed	
Low do	ta is represented	

06	2	Mark is AO1 (understanding)		
	2	Flash drives can have a higher (storage) capacity; R. references that could be to physical size eg "Flash drives are bigger" Flash drives have faster access/read/write times; No drive is required to use a flash drive // flash drive and medium are integrated; Flash drives can be reused; Flash drives are more compact; Flash drives not damaged by scratches; NE. more robust without a reason why R. points about cost unless they are supported by a reason, such as no separate drive being required NE. more portable unless this is supported with a valid reason that would not also apply to a CD		
07	1			
07	2	All marks AO2 (analyse) There is no data type for the primary key/AthleteID // The primary key/AthleteID needs a data type; The data type is specified before the fieldname // fieldname should precede the data type // PRIMARY KEY is specified before the fieldname; A . an example of a specific field and data type which are the wrong way around There is a semi-colon missing at the end; Max 2	2	

07	3	All marks AO1 (understanding)	2
		 *Minimise data duplication // no unnecessary repeated data; A. reduce for minimise R. eliminate *Eliminate data redundancy; A. reduce/minimise for eliminate Eliminate data inconsistency // improve consistency // avoid inconsistency problems; Eliminate update anomalies; A. example in context A. updates only need to be made in one place Eliminate deletion anomalies; A. example in context Eliminate deletion anomalies; A. example in context NE. easier to update/insert/delete without concrete example or good explanation NE. fewer errors when updating/inserting/deleting without concrete example or good explanation NE. saving space/memory NE. easier/faster to query Note: Only award one of the two marks with *. ie a response cannot get two	
		marks for discussion of only duplication and redundancy	

1	3 marks for AO2 (analyse) and 2 marks for AO3 (programming)
	Mark Scheme
	AO2 (analyse) – 3 marks:
	1 mark for correctly analysing the data model and identifying the tables that data needs to be extracted from (Athlete, EventEntry, Fixture) and the fields that need to be extracted (Surname, Forename, DateOfBirth), and including these and no other tables or fields in the query
	<pre>1 mark for correctly identifying how the data in the required tables should be combined to produce the desired result (the linking conditions - Athlete.AthleteID = EventEntry.AthleteID and EventEntry.FixtureID = Fixture.FixtureID)</pre>
	1 mark for identifying the correct condition to use within the model for the FixtureDate field (FixtureDate = $"17/09/2018"$) and for using the correct logical operators between all of the conditions (if a linking condition is also used)
	Note: The AO2 marks for analysing the data model should be awarded regardless of whether correct SQL syntax is used or not as they are for data modelling, not syntactically correct SQL programming
	AO3 (programming) – 2 marks:
	1 mark for fully correct SQL in two of the four clauses (SELECT, FROM, WHERE,
	ORDER BY) OR
	2 marks for fully correct SQL in all four clauses (SELECT, FROM, WHERE, ORDER BY)
	Note: For an SQL clause to be counted as "fully correct", the syntax of the clause must be correct and the relevant AO2 decisions must also have been taken for the clause. eg the SELECT clause must have the correct fields in it only
	Example Solutions
	Example 1
	<pre>SELECT Surname, Forename, DateOfBirth FROM Athlete, EventEntry, Fixture WHERE FixtureDate = "17/09/2018" AND Athlete.AthleteID = EventEntry.AthleteID AND EventEntry.FixtureID = Fixture.FixtureID ORDER BY Surname</pre>

Example 2

<pre>SELECT Surname, Forename, DateOfBirth FROM Athlete INNER JOIN EventEntry ON Athlete.AthleteID = EventEntry.AthleteID INNER JOIN Fixture ON EventEntry.FixtureID = Fixture.FixtureID WHERE FixtureDate = "17/09/2018" ORDER BY Surname</pre>	
Overall Max 4 if solution does not work fully	
Additional Guidance	
AO2 marks:	
Mark(s) can be awarded for the correct logical conditions even if the required tables are not identified as being used by the query	
Allow the inclusion of the unnecessary table EventAtFixture for AO2 and AO3 marks but only if it is linked to the other tables with a correct condition ie EventAtFixture.FixtureID = Fixture.FixtureID or alternatively EventAtFixture.FixtureID = EventEntry.FixtureID or both	
Allow omission of delimiters around date for AO2 marks only.	
AO3 marks:	
 A. table names before fieldnames separated by a full stop. A. use of Alias/AS command eg FROM Athlete AS A then use of A as the table name but note that command Alias is not required eg FROM Athlete A. A. INNER JOIN written as one word ie INNERJOIN. A. ORDER BY written as one word ie ORDERBY. A. ASC at end of ORDER BY clause but R. ASCENDING A. insertion of spaces into fieldnames. A. use of " # or ' as delimiters around date - Note: delimiters are required for AO3 correct code but not for AO2 mark for date condition A. date parts given in any order so long as they are separated by / A. 18 instead of 2018 in year I. unnecessary brackets. DPT for unnecessary punctuation - allow one semicolon at the very end of the statement, but not at the end of each clause. DPT for fieldname before table name. 	
Refer responses using nested SQL queries to team leaders.	

08		All marks AO1 (understanding)	3
		One mark per challenge that is explained.	
	Information can be combined/processed/transforred in wave that were not providual		
		Information can be combined/processed/transferred in ways that were not previously possible; A. an example of this NE. there is a lot more data	
	Technology evolves quickly (so difficult for law to keep up with changes) // new types crime become possible // some crimes are easier // future problems may not be understood;		
		Global nature of Internet means crimes may be committed in one country from outside its direct jurisdiction // laws are often national/local whilst the Internet is global // digital crime can be committed from a great distance // different countries have different laws;	
		Some crimes may be committed by states rather than individuals;	
		Different countries/cultures may have different attitudes to principles important to computer science (such as copyright, intellectual property, privacy); Note: this point relates to attitudes not legislation	
		Methods such as encryption make it harder to monitor criminal activity // electronic evidence may be harder to gather than physical evidence // can be harder to identify culprits online (eg by use of proxies, VPN) // peer-to-peer systems make it harder to identify criminal; NE. hard to catch criminals	
		Individuals may have access to large amounts of sensitive information that may be of public interest // conflicts between freedom of speech/information and privacy/state secrets;	
		Technology companies (can use their wealth) to lobby for their own interests // concern over influence of companies on legislators;	
		Resources required to enforce legislation may not be available;	
		NE. Copyright, Data Protection, Misuse, Hacking	
		Refer responses containing other relevant points to team leaders.	
		Max 3	
09	1	All marks AO1 (understanding)	•
		 15/23: Rational, Real; 108: Natural, Integer, Rational, Real; R. answers in which additional lozenges are shaded 	2

09	2	1 mark AO1 (knowledge) and	1 mark AO1 (understanding)	2	
		What is – 1 mark (AO1(knowledge)): Shows order / position / rank / place; Use in array – 1 mark (AO1(understanding)): The ordinal numbers would represent the position / index / location of the values in the array;			
10		All marks AO2 (apply)			
		Award up to four marks for the working shown, but Max 3 if the response does not show that $(A + B) \cdot (B + C \cdot (D + \overline{D})) = A \cdot C + B$			
		 1 mark for each application of an identity or theorem that produces an expression that is logically equivalent to the original expression but uses fewer logical operators. 1 mark for a successful application of the distribution law – only one mark, regardless of how many times this has been applied 			
		Continue marking until an incorr steps but does not make an erro	rect step is encountered. If a student misses out some or then continue marking.		
		Example Solution 1			
		$(A + B) \cdot (B + C \cdot (D + \overline{D}))$ = (A + B) \cdot (B + C \cdot 1) = (A + B) \cdot (B + C) = A \cdot B + A \cdot C + B \cdot B + B \cdot C = A \cdot B + A \cdot C + B + B \cdot C = A \cdot B + A \cdot C + B = A \cdot C + B	By identity $X + \overline{X} = 1$ By identity $X \cdot 1 = X$ Using distribution law By identity $X \cdot X = X$ By redundancy theorem $X + X \cdot Y = X$ By redundancy theorem $X + X \cdot Y = X$		
		Example Solution 2			
		$(A + B) \cdot (B + C \cdot (D + \overline{D}))$ = (A + B) \cdot (B + C \cdot 1) = (A + B) \cdot (B + C) = A \cdot C + B	By identity $X + \overline{X} = 1$ By identity $X \cdot 1 = X$ Using distribution law (<u>this jump is worth 2 marks</u>)		
11	1	Mark is AO2 (Analyse)		4	
		4 bits // nibble / half a byte; NE. 4, 0.5		1	
11	2	Mark is AO2 (Apply)			
		1000 // 1 x 10 ³ // 10 ³ (Hz / samp A. 10 ÷ 0.01	oles per second) // 1kHz;	1	

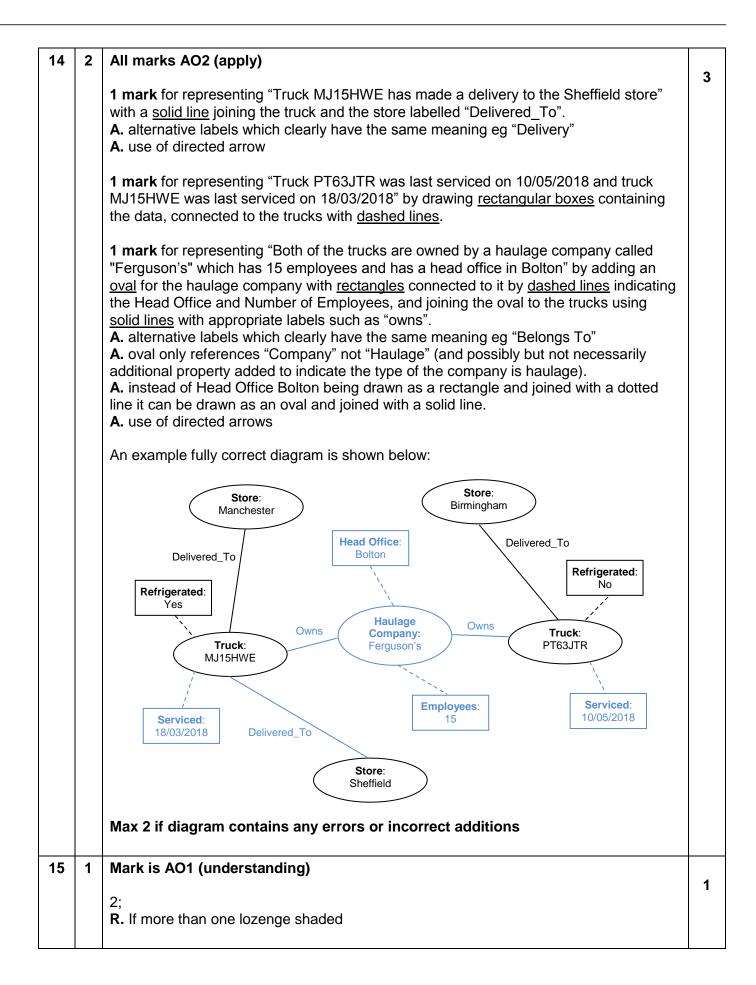

11	3	All marks A	AO1 (Understanding)	2		
		 Significance: It will not be possible to reproduce the original signal (completely) accurately // the recording is not (completely) accurate; NE. "error" without explaining that this affects the quality of the recording/reproduction NE. lower How reduced: Increase the sample resolution // increase the number of bits used to record each sample; TO. references to changing the sample rate (even if changing sample resolution also mentioned) 				
11	4	Mark is AO2 (Apply)				
		2400 (Hz) // 2.4kHz; A. 1200 x 2				
12	1	1 All marks AO2 (analyse)				
		One mark for correct purposes given for one or two registers OR two marks for correct purposes given for all three registers.				
		Register	Purpose			
		R1	The plaintext letter // the letter before it has been encrypted // the original letter // the characterCode			
		R2	The key // the number of positions to shift letters by // the value to add to the letter // the keyValue			
		R3	The ciphertext letter // the encrypted letter // the encryptedCode			
		A. "letter" for "character" and vice-versa				
12	2	Mark is AO	3 (programming)	1		
		MOV R3, R1; I. missing comma A. another command which would achieve the same affect eg ORR R3, R1, #0				

	1		1
12	3	All marks AO3 (programming)	
			3
		R3 compared to 90 or 91as first command;	
		26 subtracted from R3 and result stored back into R3 after comparison (whether	
		comparison is correct or not);	
		Fully working code;	
		DPT omission of # for immediate addressing values	
		DPT use of register number other than R3	
		I. missing commas	
		Example Solution 1	
		CMP R3, #91	
		·	
		BLT finished	
		SUB R3, R3, #26	
		B finished	
		Example Solution 2	
		CMP R3, #90	
		BGT moveBack	
		B finished	
		moveBack:	
1		SUB R3, R3, #26	
		B finished	
		Example Solution 1	
1		CMP R3, #90	
1		BLT finished	
1			
		BEQ finished	
1		SUB R3, R3, #26	
1		B finished	
<u> </u>			

D	o not award marks for both rows 1 and 2.		
	Measure	How Makes Effective	
1	Use WPA (WiFi Protected Access)/WPA2 (A. WEP) (which is strong) NE. use of password	To encrypt transmission // so that if intercepted transmissions cannot be understood/read by someone who does not have the key / by an unauthorised person	
2	2 Encrypt transmissions	So that if intercepted cannot be understood/read by someone who does not have the key / by an unauthorised person	
3	B Disable broadcast of SSID (Service Set Identifier)	So that the network is harder to discover // so that you must know the SSID to connect	
2	Use a MAC address white list A . "Hardware" for "MAC" NE . whitelist without reference to MAC addresses	So that only devices with a known address // address on the list can connect	

Level	Description	Mark Rang
3	A detailed, coherent, description that includes the use of RTS/CTS and that conveys good understanding of how the access method works. Whilst there may be some omissions from the description it contains no misunderstandings.	5-6
2	An adequate description, including at least three points from the list below. The description is logically organised so that it makes sense when read as a whole and therefore demonstrates a reasonable understanding of how the system works. The description may or may not include the use of RTS/CTS.	3-4
1	A small number of relevant points have been recalled (in this case award one mark per point, up to a maximum of two from lists below). However, the structure of the response, or lack of it, demonstrated only a very limited understanding, if any, of the access method used.	1-2
ndicati	ve Content
