A-level PSYCHOLOGY

Paper 2 Psychology in context

7182/2

Wednesday 14 June 2017 Afternoon

Time allowed: 2 hours

For this paper you may use:

• a calculator.

At the top of the page, write your surname and other names, your centre number, your candidate number and add your signature.

BLANK PAGE

INSTRUCTIONS

- Use black ink or black ball-point pen.
- Answer ALL questions. You must answer the questions in the spaces provided. Do NOT write on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.

INFORMATION

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 96.
- Questions should be answered in continuous prose.
 You will be assessed on your ability to:
 - use good English
 - organise information clearly
 - use specialist vocabulary where appropriate.

DO NOT TURN OVER UNTIL TOLD TO DO SO

SECTION A

qΑ	proac	hes i	n psv	/chol	oav
<i>-</i>	p u			,	- 31

Answer ALL questions in this section.

A recent study showed that Alzheimer's disease may be partly inherited.

John's father suffered from Alzheimer's disease. John is keen to get genetically tested to see if he will develop Alzheimer's disease.

0 1	Explain why John's genotype will NOT reveal whether he will suffer from Alzheimer's disease. [4 marks]

0 2	Describe the structure of the personality according to the psychodynamic approach. [4 marks]

-		

Tatiana's parents are concerned about her mobile phone use. She is an anxious child and has low self-esteem. Tatiana only feels good about herself when she receives messages or positive comments on social media. She feels safe when she has her phone and socially isolated without it.

Tatiana's parents worry that her dependence on her mobile phone is starting to affect her well-being and achievement at school.

0 3	Outline and evaluate the humanistic approach.
	Refer to Tatiana's behaviour in your answer.
	[16 marks]

You may use this space to plan your answer	Pr.

SECTION I	В
Biopsycho	ology
Answer Al	L questions in this section.
0 4	Explain the process of synaptic transmission [4 marks]

Lotta's grandmother suffered a stroke to the left hemisphere, damaging Broca's area and the motor cortex.

0 5	Using your knowledge of the functions of Broca's area and the motor cortex, describe the problems that Lotta's grandmother is likely to experience. [4 marks]

Lotta worries that because of her grandmother's age she will not be able to make any recovery.

0 6	Using your knowledge of plasticity and functional recovery of the brain after trauma, explain why Lotta might be wrong. [4 marks]

A researcher wants to investigate the effectiveness of physiotherapy in the recovery of stroke patients with brain damage. Carers of stroke patients will be sent questionnaires to produce quantitative data.

0 7	Explain ONE disadvantage of obtaining quantitative data in this study. [2 marks]

0 8	Write ONE question that could be used in the researcher's questionnaire to produce quantitative data and ONE question that could be used in the researcher's questionnaire to produce qualitative data. [2 marks]
	Quantitative question:
	Qualitative question:

0 9	Outline and evaluate ONE OR MORE ways of studying the brain. [8 marks]

SECTION C

Research methods

Answer ALL questions in this section.

For each multiple-choice question, completely fill in the circle alongside the appropriate answer.

CORRECT METHOD

WRONG METHODS

If you want to change your answer you must cross out your original answer as shown.

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown.

A psychologist wanted to test whether listening to music improves running performance.

The psychologist conducted a study using 10 volunteers from a local gym. The psychologist used a repeated measures design. Half of the participants were assigned to condition A (without music) and half to condition B (with music).

All participants were asked to run 400 metres as fast as they could on a treadmill in the psychology department. All participants were given standardised instructions. All participants wore headphones in both conditions. The psychologist recorded their running times in seconds. The participants returned to the psychology department the following week and repeated the test in the other condition.

10	Identify the type of experiment used in this study. Shade ONE box only.		
	A	Laboratory	\bigcirc
	В	Natural	\bigcirc
	С	Quasi	\bigcirc
	D	Research	\bigcirc
[1 mar	k]		

1 1	Identify the operationalised dependent variable in this study. [2 marks]

The results of the study are given in TABLE 1 below.

TABLE 1 Mean number of seconds taken to complete the 400m run and the standard deviation for both conditions

	Condition A (without music)	Condition B (with music)
Mean 400m time (s)	123	117
Standard deviation	9.97	14.5

[1 2]	Explain why a histogram would NOT be an appropriate way of displaying the means shown in TABLE 1. [2 marks]

1 3	Name a more appropriate graph to display the means shown in TABLE 1. Suggest appropriate X (horizontal) and Y (vertical) axis labels for your graph choice. [3 marks]
	Name of graph:
	X axis label:
	Y axis label:

BLANK PAGE

14	What do the mean and standard deviation values in TABLE 1 suggest about the participants' performances with and without music? Justify your answer. [4 marks]

1 5	Calculate the percentage decrease in the mean time it took participants to run 400 metres when listening to music. Show your workings. Give your answer to three significant figures. [4 marks]

_		

1 6

The researcher used a directional hypothesis and analysed the data using a related t-test. The calculated value of t where degrees of freedom (df) = 9 was 1.4377. He decided to use the 5% level of significance.

TABLE 2 Table of critical values of t

Level of significance for a one-tailed test	0.05	0.025
Level of significance for a two-tailed test	0.10	0.05
df = 1	6.314	12.706
2	2.920	4.303
3	2.353	3.182
4	2.132	2.776
5	2.015	2.571
6	1.943	2.447
7	1.895	2.365
8	1.860	2.306
9	1.833	2.262
10	1.812	2.228

Calculated value of t must be equal to or greater than the critical value in this table for significance to be shown.

used a related t-test in this study and, using TABLE 2, explain whether or not the results are significant. [5 marks]				

1 7	What is meant by a Type II error? Explain why psychologists normally use the 5% level of significance in their research. [3 marks]

1 8	Identify ONE extraneous variable that could have affected the results of this study. Suggest why it would have been important to control this extraneous variable and how it could have been controlled in this study. [3 marks]

1 9	The report was submitted for peer review and a number of recommendations were advised.		
	Describe the process and purposes of peer review. [6 marks]		

People's perception of how they spend their time at the gym is often not very accurate. Some spend more time chatting than on the treadmill. A psychologist decides to observe the actual behaviour of an opportunity sample of gym users at a local gym.

20	Explain why it is more appropriate for the psychologist to use an observation than a questionnaire in this case. [3 marks]

Design an observational study to investigate how people spend their time at the gym.

In your answer you will be awarded credit for providing appropriate details of:

- type of observation with justification
- operationalised behavioural categories
- use of time and/or event sampling with justification
- how reliability of data collection could be assessed.

[12 marks]

You may us	e this space	to plan your	answer.
