## MARK SCHEME for the October/November 2013 series

## 9792 PHYSICS

9792/02

Paper 2 (Written Paper), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2013 series for most IGCSE, Pre-U, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Page 2	Mark Scheme	Syllabus	Paper
	Pre-U – October/November 2013	9792	02

Se	Section A [75 marks]									
	Q	Marking Points	Marks	Tot	tals					
1	(a)	(In Fig. 1.2) weight vertically down <b>and</b> (tension) force in string force of wind on kite upwards and to right three forces shown in equilibrium	1 1 1	3						
	(b)	(In Fig. 1.3) weight and force of wind only shown explanation of how these two forces cannot be in equilibrium	1 1	2	5					

2	(a) (i)	(pressure) = <i>hpg</i> = 1.4 × 1000 × 9.8 13700 <b>or</b> 1.37 × 10 <sup>4</sup> (Pa)	1 1		
	(ii)	$(3.2 \times 1000 \times 9.8) = 31400$ or $3.14 \times 10^4$ (Pa)	1	3	
	(b)	pressure difference = 31400 –13700 = 17700 or 1.77 ×10 <sup>4</sup> (Pa) ecf from (a)(i) and (a)(ii) resultant force = 17700 × 0.45 = 7970 or 7.97 ×10 <sup>3</sup> (N)	1 1	2	
	(c)	volume of cylinder = $0.45 \times 1.8 = 0.81 \text{ (m}^3\text{)}$ mass of cylinder = $0.81 \times 2400 = 1944$ or $1.944 \times 10^3 \text{ (kg)}$ weight of cylinder = $1944 \times 9.8 = 19050$ or $1.905 \times 10^4 \text{ (N)}$ force on rod = $19050 - 7970 = 11100$ or $1.11 \times 10^4 \text{ (N)}$ ecf from 2(b)	1 1 1	3	8

3	(a)	(i)	brittle: a material that has (almost) zero plastic behaviour e.g. cast iron, ceramic, brick	1 1		
		(ii)	<u>tough</u> : a material with a high resistance to breaking <b>or</b> large plastic deformation e.g. copper, mild steel, epoxy resin, (some) plastics	1 1		
	(	(iii)	<u>ductile</u> : a material that can be plastically extended (drawn) <u>into a</u> <u>wire</u> e.g. copper (wire), (mild) steel <b>not just metal</b>	1 1	6	
	(b)	(i)	Young modulus = stress/strain values taken near end of straight line region of graph e.g. stress = $4 \times 10^9$ Pa; strain = 0.024 ± 0.001 E = $4 \times 10^9/0.024 = 1.7 \times 10^{11}$ (Pa)	1 1 1		
		(ii)	5.9 × 10 <sup>9</sup> (Pa)	1	4	
	(c)		$5.9 \times 10^9 \times 4.2 \times 10^{-7} = 2480$ or $2.48 \times 10^3$ (N)	1	1	]
	(d)		(as the sample is stretched) the cross-sectional area is not constant cross-sectional area <u>decreases</u>	1 1	2	13

			Pre-U – October/November 2013	9792		02	
							r
4	(a)	same shape graph displaced <u>forwards</u> by between one and two months maximum at 20.5 °C <u>and</u> minimum at 7.5 °C <u>reason</u> : high thermal capacity (or equivalent) of the sea				3	
4	(b) (i)	energe ecf find $= mc$ $\Delta \theta = = 3.5$	energy supplied = $0.6 \times 6.7 \times 1000 \times 3600 = 1.45 \times 10^7$ (J) ecf from reading from graph = $mc\Delta\theta$ = $1000 \times 4200 \times \Delta\theta$ $\Delta\theta$ = $1.45 \times 10^7/4.2 \times 10^6$ = $3.5$ (°C)		1 1 1		
	(ii) durir by ra plus e.g. volu		g the night (a lot of) thermal energy (heat) will be lost ( diation and/or convection <b>another valid reason</b> nixing effect of waves will distribute energy (over a larg ne)	to the air) ger	1 1 1		
		e.g. \	variable cloud cover will affect (rise and ) fall of temper	ature		6	9

5	(a)	emf: energy per unit charge	1		
		supply	1		
		terminal pd: energy per unit charge available at the terminals of the supply for conversion from electrical energy into other forms of			
		energy	1	3	
	(b) (i)	9.6 (V) (pd AB = 4.8 mA × 2.0 kΩ)	1		
	(ii)	3.2 (mA) (current A to C = $8.0 \text{ mA} - 4.8 \text{ mA}$ )	1		
	(iii)	12.8 (V) (pd AC = $3.2 \text{ mA} \times 4.0 \text{ k}\Omega$ ) ecf from (b)(ii)	both		
	(iv)	3.2(V) (pd BC = 12.8V – 9.6V) ecf from (b)(i) and (b)(iii)	1		
	(v)	0.4 (mA) (current BC = $3.2 V/8.0 k\Omega$ ) ecf from (b)(iv)	1		
	(vi)	4.4 (mA) (current BD = 4.8 mA – 0.4 mA) ecf from (b)(v)			
	(vii)	3.6 (mA) (current CD = 8.0 mA – 4.4 mA) ecf from (b)(vi)	three		
	(viii)	7.2V (pd CD = 20V – 12.8V) ecf from (b)(iii)			
	(ix)	2.0 (k $\Omega$ ) (Resistance R <sub>2</sub> = 7.2 V/3.6 mA)			
		ect from (b)(vii) and (b)(viii)	1		
	(x)	8.0(mA) (current from D to battery)	1	7	
	(c)	for series addition the current through each resistor must be the	1		
		resistors must be the same			
		neither is true in this case	1	2	
	(d)	(R =) 20 V/8.0 mA	1		
	. ,	= $2500 \Omega$ or $2.5 k\Omega$	1	2	14
			1	-
